

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2018 - 2019 (Odd Semester)

Innovative Practices Description

UNIT I CLASSIFICATION OF SIGNALS AND SYSTEMS

Degree, Semester & Branch: III Semester B.E. ECE B

Course Code & Title: EC8352 Signals and Systems

Name of the Faculty member: Mrs.M.Sangeetha

Name of the Topic: Classification of Signals and Systems

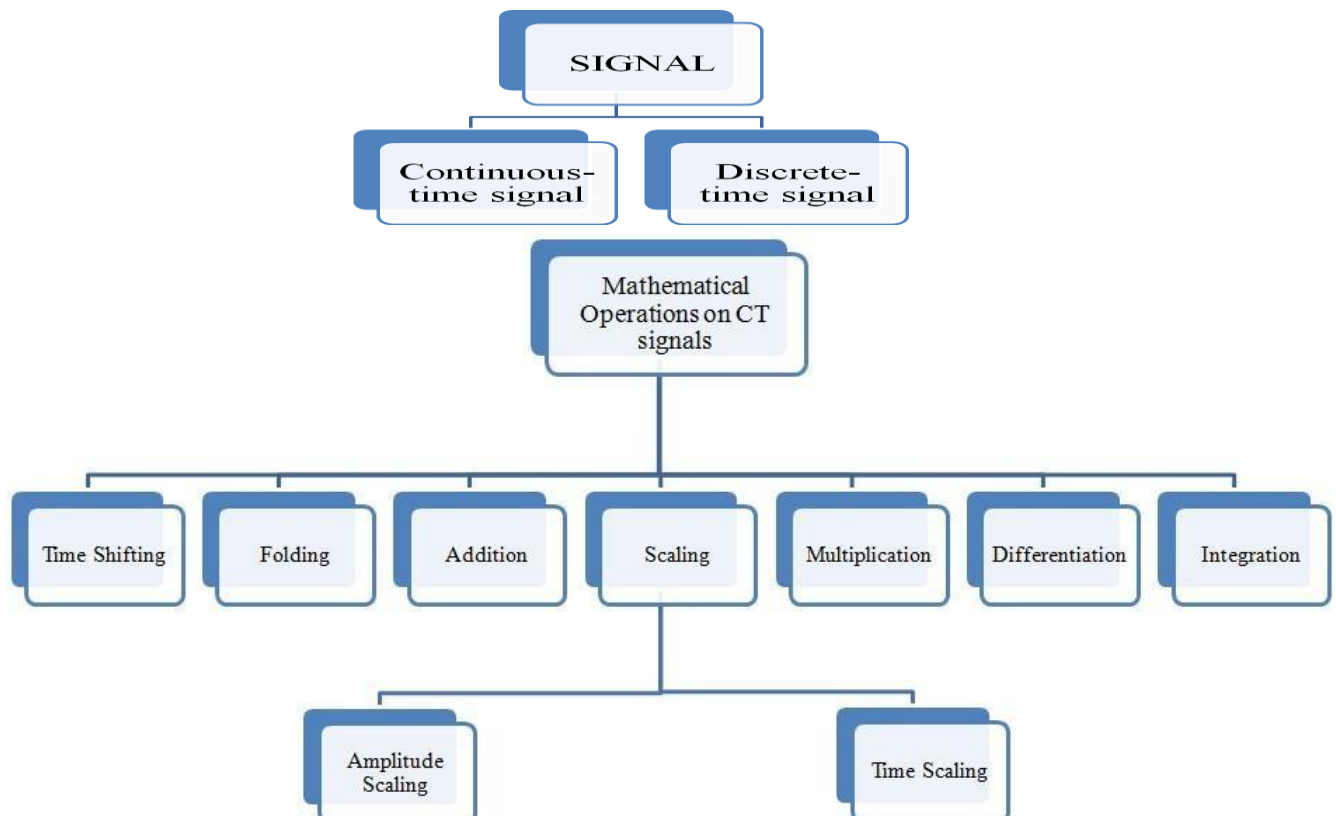

Name of the Innovative Practice: Brainstorming

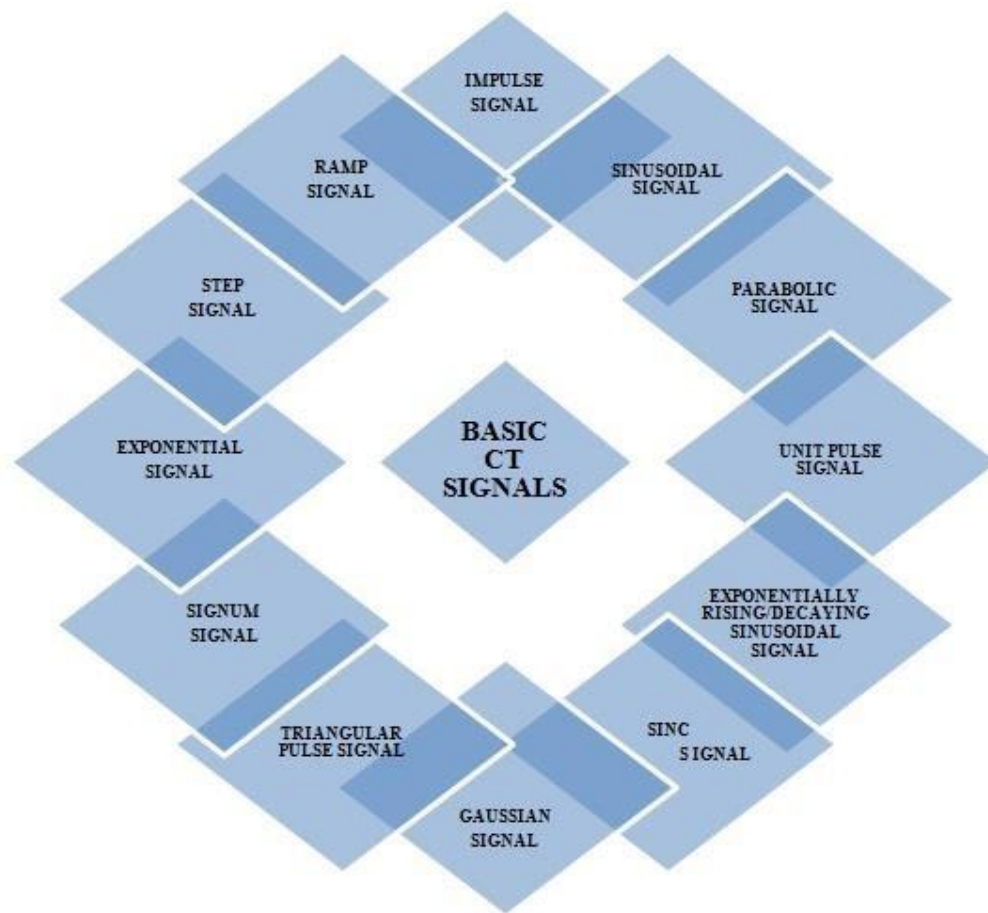

Description of Brainstorming:

Brainstorming is a group problem-solving method that involves the spontaneous contribution of creative ideas and solutions. This technique requires intensive, freewheeling discussion in which every member of the group is encouraged to think aloud and suggest as many ideas as possible based on their diverse knowledge.

Signal is a physical quantity that varies with respect to time, space or any other independent variable. In other words a signal is defined as any physical quantity represented as a function of one or more variables, which conveys some useful information about that particular quantity. In simple terms anything that carries some sort of information is known as a signal, for example ECG (Electrocardiogram) that provides information about the health of a person's heart is a signal. Signals can be given as input to any compatible system to do the necessary modifications, and what we get as a result is known as an output signal. Some other examples of signals are human voice, sounds produced by animals, sign language, videos, heartbeat, electrocardiogram etc.,

Brainstorming activity is conducted for getting better knowledge to the students.

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	3		2			1		2		2

CO1: The students will be able to analyze the various properties of signals and systems
