

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2018 - 2019 (Even Semester)

Innovative Practices Description

Degree, Semester & Branch: VIII Semester B.E. ECE B

Course Code & Title: GE6075 Professional Ethics in Engineering

Name of the Faculty member: Mrs.R.Divya

Name of the Topic: Working function of the heart, Einthoven Triangle

Name of the Innovative Practice: Animated video

Description:

Safety is the state of being "safe" (from French sauf), the condition of being protected from harm or other non-desirable outcomes. Safety can also refer to the control of recognized hazards in order to achieve an acceptable level of risk.

In the picture on the left, there is a lion, which is a hazard, but this alone is not enough to cause harm to occur. In the picture on the right, a person is present. This introduces the possibility of harm occurring should the lion attack the person. The picture on the right indicates a situation in which "risk" exists. It is necessary to understand that this situation is distinct from the situation in which a "hazard" exists.

Even if harm does not occur, there may exist potential for risk and harm. If these are left alone, it can be said that the situation possesses a high possibility of industrial accidents occurring. As technology has progressed, a great variety of machines and chemical substances have come to be used, which has led to diversification in the potential for risk and harm. Also, to further reduce industrial accidents, it is necessary to implement safety measures such as safety light curtains and safety laser scanners, in a preemptive, not reactive, manner.

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO4	1	1	-	-	1	-	-	3	1	1	-	1

CO4: The students will be able to Recognize the safety, risks, risk benefit analysis and rights of an engineer.
