

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2018- 2019 (Odd Semester)

Innovative Practices Description

UNIT I (BIASING OF DISCRETE BJT, JFET AND MOSFET)

Degree, Semester & Branch: III Semester B.E. ECE A

Course Code & Title: EC8351 & ELECTRONIC CIRCUITS I

Name of the Faculty member: Mr.S.Vijayakumar

Name of the Topic: BJT

Name of the Innovative Practice: Data Sheet of BJT by various companies

Description:

A bipolar junction transistor is a three terminal semiconductor device consisting of two p-n junctions which is able to amplify or magnify a signal. It is a current controlled device. The three terminals of the BJT are the base, the collector and the emitter. A signal of small amplitude if applied to the base is available in the amplified form at the collector of the transistor. This is the amplification provided by the BJT.

BJT is characterized by many parameters such as I_c , I_b , I_e , maximum power dissipation and maximum operating temperature. Data sheet helps to find these parameters and It is used in many IC testing industry to check these parameters after fabrication.

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	1	-	-	-	-	1	1	-	-	-

CO1: The students will be able to design the various biasing circuits of BJT, JFET and MOSFET
