

RAMCO INSTITUTE OF TECHNOLOGY

Department of Electronics and Communication Engineering

Academic Year: 2018- 2019 (Even Semester)

Innovative Practices Description

UNIT V – SAMPLING AND QUANTIZATION

Degree, Semester & Branch: IV SEMESTER B.E. ECE B

Course Code & Title: EC8491 Communication Theory

Name of the Faculty member: Mr.R.Deiva Nayagam

Name of the Topic: Sampling Theorem

Name of the Innovative Practice: Animated video

Description:

Animated video is an engaging instrument that can help you tell your story more comprehensively. 65% of people are visual learners, and 90% of the information transmitted to the brain is visual. Animation evokes emotions that resonate with the viewers. It sparks conversations and makes your audience want to follow the story.

A continuous-time (or analog) signal can be stored in a digital computer, in the form of equidistant discrete points or samples. The higher the sampling rate (or sampling frequency, f_s), the more accurate would be the stored information and the signal reconstruction from its samples. However, high sampling rate produces a large volume of data to be stored and makes necessary the use of a very fast analog-to-digital converter.

Animated video for Sampling theorem was displayed using Projectors and explained about the how the continuous time analog signal is converted into discrete signal. Through which, the students will get in-depth knowledge in sampling theorem visualize the concept behind the sampling theorem.

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO5	3	3	1	1				1		1		1

CO5: The Students will be able to implement the basic concepts of sampling and Quantization
