

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2018 - 2019 (Odd Semester)

Innovative Practices Description

UNIT I (BIASING OF DISCRETE BJT, JFET AND MOSFET)

Degree, Semester & Branch: III Semester B.E. ECEB

Course Code & Title: EC8351 & ELECTRONIC CIRCUITS I

Name of the Faculty member: Mrs.R.Ramalakshmi

Name of the Topic: Biasing of BJT

Name of the Innovative Practice: Real Time Example & Animated Video

Description:

Transistor Biasing: Biasing is the process of providing DC voltage which helps in the functioning of the circuit. A transistor is biased in order to make the emitter base junction forward biased and collector base junction reverse biased, so that it maintains in active region, to work as an amplifier. Biasing in electronics means establishing predetermined voltages or currents at various points of an electronic circuit for the purpose of establishing proper operating conditions in electronic components.

The students were explained about the concepts biasing and its types and an animated video on biasing of transistor was also played to understand the concepts of biasing more clearly.
