

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2018 - 2019 (Even Semester)

Innovative Practices Description

UNIT II (APERTURE AND SLOT ANTENNAS)

Degree, Semester & Branch: VI Semester B.E. ECEA

Course Code & Title: EC6602 Antenna and Wave Propagation

Name of the Faculty member: Mrs.R.Ramalakshmi

Name of the Topic: Horn Antenna

Name of the Innovative Practice: Demonstration

Description:

A horn antenna or microwave horn is an antenna that consists of a flaring metal waveguide shaped like a horn to direct radio waves in a beam. Horns are widely used as antennas at UHF and microwave frequencies, above 300 MHz. Horn antennas are commonly used as the active element in a dish antenna. The horn is pointed toward the center of the dish reflector. The use of a horn, rather than a dipole antenna or any other type of antenna, at the focal point of the dish minimizes loss of energy (leakage) around the edges of the dish reflector.

Animated video on horn antenna was also shown to the students and the practical applications of the antennas were explained to the students clearly.
