

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2018 - 2019 (Even Semester)

Innovative Practices Description

UNIT I (WIRELESS CHANNELS)

Degree, Semester & Branch: VIII Semester B.E. ECEA

Course Code & Title: EC6801 Wireless Communication

Name of the Faculty member: Mrs.R.Ramalakshmi

Name of the Topic: Types of Fading

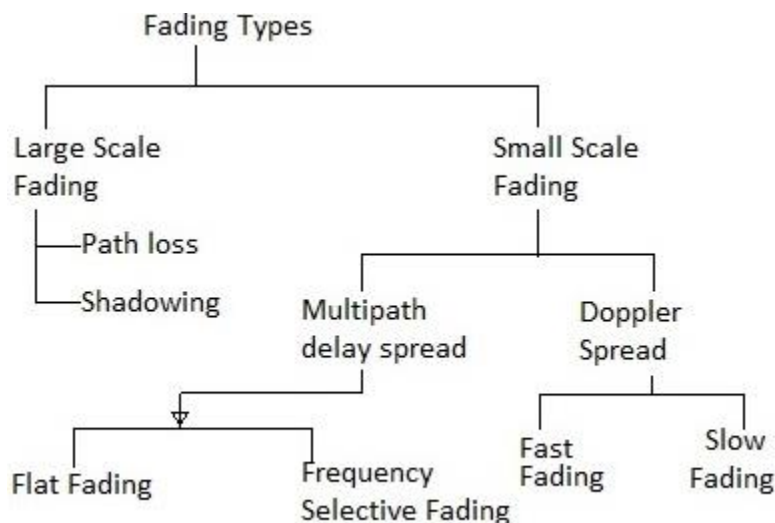

Name of the Innovative Practice: Lecture Video

Description:

In wireless communications, fading is variation of the attenuation of a signal with various variables. These variables include time, geographical position, and radio frequency. A fading channel is a communication channel that experiences fading.

The Fading types are divided into large scale fading and small scale fading (multipath delay spread and doppler spread). These fading types are implemented as per Rayleigh, Rician, Nakagami and Weibull distributions or models. Introduction: As we know wireless communication system consists of transmitter and receiver.

A lecture video on fading and its types was played to the students to understand about the concepts of fading and its types.
