

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2019– 2020 (Even Semester)

INNOVATIVE PRACTICE – Unit III

Degree, Semester & Branch: VIII Semester B.E. ECE A

Course Code & Title: EC6802 Wireless Networks

Name of the Faculty member: Mr.K.Ragavan

ACTIVITY

Topic: Congestion Control

Learning Outcome:

- The students will be able to learn the concept of congestion control in traditional TCP

Activity Chosen: Quick write

Justification:

The concept related to traditional TCP is important. In order to make the students more attentive quick write activity was planned.

Time Allotted for the Activity: 3 Minutes

Details of the Implementation:

- The students were asked to take a paper and pen.
- They were asked to write the types of slow start mechanism in Transmission Control Protocol
- After completing the task, students submitted the quick write paper.

Assessment of Effectiveness/Success of the Activity:

- ✓ The assessment of effectiveness of the activity was felt based on the performance of internal Assessment Test II (Part A -5 Question and Part C 8a.) related to congestion control.

Reflective Critique:

Benefits of conducting this activity:

- The activity helped to know the involvement of the students in listening to the class.
- It helps to avoid unwanted distractions during the class, since the activity is time bounded.

Challenges:

- Recapping the concept in the class was a challenging task.

R. Arshana

* The behaviour TCP shows after the detection of congestion is called slow start.

* The Sender sends one packet & waits for acknowledgement. If the acknowledgement arrives, the sender increases the congestion window by one. (exponentially increase)

* This exponential growth stops at congestion threshold

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO3	3	3	3	2	2	-	-	-	-	3	-	3

CO3: The students will be able to illustrate various techniques in mobile transport layers.
