

RAMCO INSTITUTE OF TECHNOLOGY

Department of Electronics and Communication Engineering
Academic Year: 2019-2020 (Even Semester)

Innovative Practices Description for Unit-I

Degree, Semester & Branch: II Semester B.E. ECE B

Course Code & Title: EC8251 Circuit Analysis

Name of the Faculty member: Dr.B.Deepa Lakshmi

Name of the Topic: Mesh and Nodal Analysis

Name of the Innovative Practice: Visible Quiz

Date & Duration: 09.01.2020 (20 Minutes)

Description:

Students in groups discuss the appropriate response to quiz questions, typically multiple choice (A, B, C, or D) or True (T) False (F). Each team has a set of large cards imprinted with one of the four letters. The cards also have a unique color. One person from each team displays the team's answer allowing the instructor to determine how well students understood the question. She then gives the correct answer. Visible Quiz card have the advantage of allowing teachers to identify immediately the groups giving incorrect answers.

Goals (Learning Outcomes):

1. The students will be able to state and explain about Kirchhoff's Current Law and Kirchhoff's Voltage Law.
2. The students will be able to differentiate Mesh and Nodal Analysis

Use of appropriate method:

Justification for choosing the Activity:

This activity enables the student to express their answers with clear ideas on KVL and KCL to be applied for Mesh and Nodal analysis.

Effective Presentation: (Implementation (Plan & Execution) with Proof):

The activity is planned for 20 minutes and the students were interested to answer using the cards provided.

Execution :

Significance of Results: (Assessment of Effectiveness/Success of the Activity):

The students could able to answer with the choices provided and differentiate the topics provided and clarify their doubts among them in this activity.

Changes required for future (if required):

Time may be increased for this activity to conduct in a better way. The students should answer within a time limit.

Reflective Critique:

Challenges:

While asking the students for this activity, some students are confused with KCL & KVL. Remaining students could able to recollect the answers.

Benefits:

The students participated eagerly and interested in these types of activities for answering which is useful for them for their examination.

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	3	-	1	-	2	3	2	-	2

CO1: The students will be able to determine the behavior of DC and AC circuits.
