

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2019 – 2020 (Even Semester)

INNOVATIVE PRACTICE – Unit I

Degree, Semester & Branch: II Semester B.E. ECE A

Course Code & Title: EC8252 Electronic Devices

Name of the Faculty member: Dr.S.Periyanayagi

ACTIVITY

Topic: Unit I Semiconductor Diode - Revision

Learning Outcome:

- The students will be able to explain the structure and characteristics parameters of PN diode

Activity Chosen: Visible Quiz

Justification:

Electronic devices course is one of the fundamental subjects and the concept of PN diode plays a vital role in forthcoming courses in the higher semesters. In order to assess the understanding level of the students, visible quiz activity was conducted.

Time Allotted for the Activity: 10 Minutes

Details of the Implementation:

- Initially, 10 questions covering the important topic in the unit was taken and prepared in a power point presentation.
- The students were split into a group of four members (class strength: 40). 10 groups were formed and each member of the group were given with a card containing A, B, C, D as shown below.

- Each group was provided with a paper to write down the answer for each question.
- Once the question is displayed one by one. The group member should raise the correct option card for the question.

Visible Quiz

- How many junction's do a diode consist?
 - A. 0
 - B. 1
 - C. 2
 - D. 3
- If the positive terminal of the battery is connected to the anode of the diode, then it is known as
 - A. Forward biased
 - B. Reverse biased
 - C. Equilibrium
 - D. Schottky barrier

28.01.2020

Visible Quiz

- The Drift Current in the semiconductor
 - A. Current Density $J = (pn_A + ni_p)qE$
 - B. Current Density $J = (ni_n + pn_p)qE$
 - C. Current Density $J = (ni_n + ni_p)qE$
 - D. Current Density $J = (np_p - pn_p)qE$
- The Diode Current
 - A. Current $I = I_s \left(e^{\frac{V}{kT}} - 1 \right)$
 - B. Current $I = I_s \left(e^{\frac{V}{kT}} - 1 \right)$
 - C. Current $I_2 = I_s \left(e^{\frac{V}{kT}} - 1 \right)$
 - D. Current $I = I_s \left(e^{\frac{V}{kT}} - 1 \right)$

28.01.2020

Visible Quiz

- The Transition Capacitance of the PN diode
 - A. Increases with increase in Depletion Layer Width
 - B. Decreases with Increase in Depletion Layer Width
 - C. Increases with increase in Barrier Potential
 - D. Decreases with decrease in Barrier Potential
- The Diffusion capacitance of a PN Junction
 - A. Decreases with increasing current and increasing Temperature
 - B. Decreases with decreasing current and increasing Temperature
 - C. Increases with increasing current and increasing Temperature
 - D. Does not depend on Current and Temperature

28.01.2020

Visible Quiz

- The Reverse Recovery time t_{rr}
 - A. Sum of storage time t_s and forward recovery time
 - B. Twice the storage time t_s
 - C. Sum of Storage time t_s and transition Time t_t
 - D. Equal to transition time t_t
- It is possible to measure the voltage across the potential barrier through a voltmeter?
 - A. True
 - B. False

28.01.2020

Visible Quiz

- Transition capacitance is also called as _____
 - A. diffusion capacitance
 - B. depletion capacitance
 - C. conductance capacitance
 - D. resistive capacitance
- At T=0 K, the location of Fermi level with respect to the Ec and Ev for the n-type material is?
 - A. Above than conduction band
 - B. Midway
 - C. Lower than Ev
 - D. Greater than Ed

28.01.2020

- The other members will write the team answer in the paper given. Finally, the paper was interchanged with the group and finally discussed the correct answers.
- The highest scoring group was awarded with a pen as a token of appreciation.

Team no-3

2. ✓
3. ✓
4. ✓
5. ✓
6. ✓
7. ✓
8. ✓
9. ✓
10. ✗

$\left(\frac{9}{10} \right)$

$C_T = \frac{A \epsilon}{\omega}$

$C_D = \frac{I T}{q V_T}$

Team No: 6.

1) M. Jyoti Mahimani 2) V. S. Chaitanya
3) Chaitanya 4) Anudharshini

1) B-1 (✓)
2) A-Forward (✓)
3) C- (✗)
4) (B) Curve: $I = I_0 (e^{\frac{V}{V_T}} - 1)$ (✓)
5) B) ~~not~~ with $\downarrow$ in depletion layer (✓)
6) C) $\uparrow$ with $\uparrow$ (✗)
7) C) Sum of storage & Tr (✓)
8) B) False (✓)
9) B) Depletion (✓)
10) D) (✗)

$\left(\frac{1}{10} \right)$

Assessment of Effectiveness/Success of the Activity:

- ✓ The assessment of effectiveness of the activity was measured by the performance in the internal Assessment Test - I
- ✓ After completing the activity, the corrected paper with mistakes highlighted were given to the teams and discussed the correct answers.

Reflective Critique:**Benefits of conducting this activity:**

- This activity helped to quickly recap the important fundamental concepts related to PN Diode.
- Visible quiz is a team-based activity which supports collaborative learning through which the concepts will be made clear.

Challenges:

- This activity was planned for 10 minutes but it took 15 minutes for completing the discussion.
- The highest mark obtained by the group is 9/10.

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO2	3	1	1	-	-	-	-	2	-	3	-	2

CO1: The students will be able to Explain the structure, operations and characteristics of PN Junction diode

INNOVATIVE PRACTICE – Unit II

Degree, Semester & Branch: II Semester B.E. ECE A

Course Code & Title: EC8252 Electronic Devices

Name of the Faculty member: Dr.S.Periyanayagi

ACTIVITY

Topic: h-parameter Model

Learning Outcome:

- The students will be able to apply the h parameter model while designing amplifiers.

Activity Chosen: Four Corner Four Question

Justification:

The concept of h parameter model is important and will be used in future courses like Electronic circuits I, Linear Integrated circuits. The common base current gain, common emitter current gain and relationship between alpha and beta will always be confused. In order to avoid such confusion this activity is conducted.

Time Allotted for the Activity: 5 Minutes

Details of the Implementation:

After teaching the concept of h parameter model, the students were given with a 4 fold paper. The Four corner four question were displayed in the power point presentation and students were asked to write the answer in each fold as shown below.

Assessment of Effectiveness/Success of the Activity:

- ✓ The assessment of effectiveness of the activity was felt when most of the students wrote correctly.
- ✓ After completing the activity, the corrected paper with mistakes highlighted were given to the students.

Reflective Critique:

Benefits of conducting this activity:

- The concept of h parameter model can be easily applied for solving problems.
- It helps the student to perform modelling while designing amplifiers

Challenges:

- Few students got confused. Once the paper has been evaluated and given to the students understood the mistake done. The time for discussing the concept in the next class is more.

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO2	3	1	1	-	-	-	-	2	-	2	-	2

CO2: The students will be able to describe the basic geometry, operation and various configuration of Bipolar Junction Transistor.
