

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electronics and Communication Engineering
Academic Year: 2018 - 2019 (Even Semester)

Innovative Practices Description

UNIT III DC MACHINES

Degree, Semester& Branch: II Semester B.E. ECE B

Course Code & Title: BE8254 Basic Electrical and Instrumentation Engineering

Name of the Faculty member: Dr.B.Deepa Lakshmi

Name of the Topic: Principle and Operation of Generator

Name of the Innovative Practice: Animated Video

Description

Animated videos are used to enhance learner understanding by maintaining their constant concentration towards the subject matter being delivered in class. This is justified by performances and test scores. They have also improved learners' practical skills by utilizing the use of the five sense organs. The rapid development of information technology has given a new breath toward usage of computer in education. One of the popular is a multimedia technology. A study found that use of animation video has capable to increase imagination and visualization of students.

A dc generator is an electrical machine which converts mechanical energy into electrical energy. This energy conversion is based on the principle of production of dynamically induced emf. According to Faraday's laws of electromagnetic induction, whenever a conductor is placed in a varying magnetic field , an emf gets induced in the conductor. The students could be able to explain the working principle of Generator from this video.

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO3	3		1		1	1		1		1	1	2

CO3: The students will be able to describe the characteristics of DC Generator and Motor.
