

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University
NAAC Accredited with 'A+' Grade & An ISO 9001: 2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Artificial Intelligence and Data Science

Academic Year: 2024- 2025 (EVEN Semester)

Active Learning Best practices: Think Pair Share

Degree, Semester & Branch: B.Tech. Artificial Intelligence and Data Science – IV Sem

Course Code & Title: AD3491 – Fundamentals of Data Science and Analytics

Name of the Faculty member: Mrs. G. Kavitha, AP/AI & DS

Theme of discussion: Think Pair Share

Topics Covered: Unit- V – Logistic and Multiple Regression

Date and Time: 14.05.2025 & 10.30 A.M to 11.15 A.M

Active Learning Best practices: Think Pair Share

Unit / Topic: Unit V / Logistic and Multiple Regression

Course Outcome: CO5 - Build models for predictive analytics.

Topic Learning Outcome: TLO45

Activity Chosen: Think-Pair-Share

Justification:

- Multiple regression and logistic regression is an important topic in Data Science and also the question was asked in most of the university questions. Students think about a topic on their own and express their thoughts with their classmates, which helps them enhance their creative thinking, understanding the concepts and oral communication abilities.

Details of Implementation

- Active learning strategy, in which students work on a problem posed by instructor, first individually (Think), then in pairs (Pair) or groups, and finally together with the entire class (Share).
- T (Think): Teacher asks a specific question about the topic. Students "think" about what they know or have learned, and come up with their own individual answer to the question. [Takes 1-3 Minutes].
- P (Pair): Teacher asks another question, related to the previous one that is suitable to deepen the students' understanding of the topic. Each student is paired with another student. They share their thinking with each other and proceed with the task. [Takes 5-10 Minutes].
- S (Share): Students share their thinking (or solution) with the entire class. Teacher moderates the

discussion and highlights important points. [Takes 10-15 minutes].

Time Allotted for the Activity: 30 Minutes

CO – PO / PSO Mapping

CO	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO5	3	3	3	3	2	2	3	3	2	2	2	3

PO/PSO Mapped

Innovative Practice	PO1	PO2	PO3	PO4	PO5	PO9
	3	2	2	2	2	2
Justification for correlation	Students can be able to Applies knowledge of mathematics, statistics, and computing to solve complex engineering problems using regression.	Students can be able to identify and formulate regression-based solutions to data-driven problems..	Students can be able to design and apply appropriate regression models to complex scenarios, e.g., prediction, classification.	Students can be able to conduct experiments, collect and analyze data using multiple/logistic regression to draw valid conclusions.	Students can be able to use modern tools (e.g., R, Python, Excel) for modeling and analysis.	Students can be able to works in teams while applying regression techniques.

Innovative Practice	PO10	PO11	PO12	PSO1	PSO2	PSO3
	2	2	2	3	2	3
Justification for correlation	Students can be able to describe technical results of regression models through reports or presentations to stakeholders.	Students can be able to understand societal and ethical implications of data-driven decision-making.	Students can be able to stay updated on advanced regression techniques and real-world applications.	Students can be able to understand and apply knowledge in domain-specific problems using regression models..	Students can be able to apply programming and statistical tools to develop and analyze regression-based solutions.	Students can be able to exhibit data science proficiency through practical implementation of regression analysis on real-world data.

Glimpses:

Reflective Critique

Feedback of practice from students and other stakeholders:

- Working as a pair, they can share their knowledge with them and come up with better understanding about the topic.
- Different types of reasoning/justification based questions are discussed in the class room, so students come to know how to answer/draw diagrams whenever new real time system is asked in the question.

Benefit of the practice:

- Students are actively engaged and students learn from each other.
- Makes class interactive and builds a friendly, yet academic atmosphere.
- Includes all the students in the teaching-learning process.

Feedback Questions:

1. Did the plan align with your expectations?
Yes No
2. How effectively was the innovative practice plan implemented?
Excellent Good Satisfactory
3. How well did you understand the objectives and purpose of the innovative practice plan?
1 2 3 4 5
4. Were the necessary resources and support provided for successful implementation?
Yes No
5. Did you notice any specific benefits or changes resulting from the plan?
Yes No
6. How engaged were you throughout the practice plan?
1 2 3 4 5
7. Did the plan provide opportunities for active participation and collaboration?
Yes No

Feedback Analysis:

Did the plan align with your expectations?

 Copy

37 responses

- Yes
- No

How effectively was the innovative practice plan implemented?

 Copy

37 responses

- Excellent
- Very Good
- Good
- Satisfactory

How well did you understand the objectives and purpose of the innovative practice plan? (Highest 5)
