

Department of Artificial Intelligence and Data Science

Academic Year: 2025- 2026 (Odd Semester)

Degree, Semester & Branch : B.Tech, V & AI & DS

Course Code & Title : CS3551 & Distributed Computing

Name of the Faculty member : Mrs. C.Usharani, AP/AD

Active learning practices: Think Pair Share

➤ **Unit/Topic:** III/ Chandy Misra Haas Algorithm for AND Model

➤ **Course outcome:** CO3

➤ **Topic Learning outcome:** TLO30

➤ **Justification:**

As part of the think-pair-share method of collaborative learning, students are asked to thinking on their own and sharing what they've learned with their peers.

This method consists of four steps

❖ **Step 1(5 minutes)**

The group of students listens to the question posed by the instructor.

❖ **Step 2(10 minutes)**

After having some time to reflect, each student writes their answers.

❖ **Step 3(15 minutes)**

Pairs of students read and discuss their answers.

❖ **Step 4(15 minutes)**

The teacher invites several students to share their thoughts and ideas with the whole class.

➤ **Time Allotted for the Activity:** 45 Minutes

➤ **Details of the Implementation:**

Think-Pair-Share, a Collaborative active learning practice, conducted for III AI & DS-A section students, in which students work on a question posed by instructor.

T (Think): Students think about the given topic of Chandy Misra Haas Algorithm for AND Model individually and then write the responses.

P (Pair): Each student is paired with their peers or groups to discuss the deadlock detection concepts and Chandy Misra Haas algorithm for AND Model.

S (Share): Students discussed with their peers and expand the share to the whole class discussion. Mr. Rajapande and Ms. Shanmugapriya of III AI & DS-A section shared their views to the whole class.

➤ **CO-PO/PSO Mapping:**

CO	PO1	PO2	PO3	PO5	PO8	PSO1	PSO3
CO3	3	2	2	2	2	3	2
(1-Low 2-Moderate 3-High)							

➤ **PO/PSO mapped:**

Innovative Practice	PO1	PO2	PO3	PO5	PO8	PSO1	PSO3
Justification for Correlation	Apply theory and principles to use resource sharing techniques in distributed system	Identify the models of parameters to solve deadlock can be occurred in distributed systems.	Able to identify suitable criteria in distributed mutex for the evaluation of alternate design solutions.	Demonstrate proficiency in identify modern engineering tools, techniques and resources for distributed mutex and deadlock detection.	Demonstrate effective communication solve problem, conflict resolution and leadership skills.	Students can be able to understand and apply fundamental principles of distributed mutex and deadlock detection in distributed systems.	Students can be able to apply distributed mutex techniques to forecast future trends in the parallel computing and high performance computing.

Glimpses of the Practice:

➤ Reflective Critique:

✓ **Feedback of practice from students and other stakeholders:**

Students felt they had adequate time to think critically.

Students felt this activity provides a chance to collaborate in groups.

✓ **Benefit of the practice** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

The students can get more clarity in the particular topic by discussing and sharing their views with the other students in the class.

✓ **Challenges faced in implementation:**

Only one person selected from each group to share their answers in front of the class

FEEDBACK QUESTIONS

Date and Time: 27.09.2025 & 9.00 am to 9.45 am.

Feedback collected in class and also through online:

Google form Link: <https://forms.gle/kZkH22dWNP33ELuw6>

1. How useful was the Think pair Share activity that we did in class?
Very useful / Not useful
2. Do you have a clear understanding of Chandy Misra Haas Algorithm?
Excellent / Good / Fair
3. Does this Think Pair share activity improve listening and grasping capability?
Excellent / Good / Fair

Feedback Analysis

1. How useful was the Think Pair Share activity that we did in class ?
48 responses

2. Do you have a clear understanding of Chandy Missra Haas Algorithm?
48 responses

3. Does this Think Pair Share activity improve listening and grasping capability?

48 responses
