

Department of Artificial Intelligence and Data Science
Academic Year 2024 – 2025 (Even Semester)

Degree, Semester & Branch: B.Tech, IV & Artificial Intelligence and Data Science & 'A'

Course Code & Title: CS3591 & Unicast Routing

Date and Time: 21.04.2025 & 12.20 pm to 1.05 pm

Name of the Faculty member: Mrs.C.Usharani

Innovative Practice Description

- **Unit / Topic:** Unit IV / Unicast Routing
- **Course Outcome:** CO4
- **Topic Learning Outcome:** TLO 31
- **Activity Chosen:** Mind Map
- **Justification:**

The **Mind Map activity method** is a powerful and innovative teaching and learning strategy that helps in organizing information visually. Through this activity, their understanding of Unicast Routing and its types is strengthened. It frequently starts with a single thought, depicted as an image in the middle of a blank page, to which related images, words, or word fragments are added. It's especially effective in educational settings because it encourages creativity, critical thinking, and a deep understanding of concepts.

Time Allotted for the Activity: 45 Minutes

- **Details of the Implementation:**

1. Instructor explained the concept of Unicast Routing in classroom.
2. Based on the discussion, the instructor asked the students to create a mind map.
3. Each student created a mind map on types of Unicast Routing
4. They identify key subtopics and add supporting details
5. Students represent the concepts visually including Central theme, Associations, Curved Lines and Keywords.

CO-PO/ PSO mapping:

CO	PO1	PO2	PO9	PO12	PSO 3
CO4	3	2	2	2	3

(1 — Low 2 — Moderate 3 — High)

PO & PSO mapping:

Innovative practice	PO1	PO2	PO9	PO12	PSO3
	3	2	2	2	1
Justification for correlation	Students will understand, analyze, and solve problems related to unicast routing in computer networks.	Students can able to develop effective unicast routing solutions that optimize performance and ensure accurate data delivery.	Students will effectively as an individual and as a member or leader in multidisciplinary teams to design, implement, and evaluate unicast routing protocols in networked systems.	Students will acquire the knowledge of continuous improvement and adaptation of routing decisions throughout the life of a network.	Apply adaptive and intelligent routing techniques, including unicast routing algorithms, to design and analyze efficient, secure, and scalable communication systems in dynamic network environments.

- Images / Screenshot of the practice:**

Sample Mind map:

• Reflective Critique:

❖ Feedback of practice from students and other stakeholders:

- ✓ Students felt the mind map activity engaging and helpful in visualizing key concepts
- ✓ Students appreciated the interactive nature, stating it improved their retention of information

1. How useful was the mind map paper activity that we did in class today?

49 responses

2. Do you have a clear understanding of Unicast Routing Concept?

49 responses

3. Does this mind map activity improve listening and grasping capability?

49 responses

❖ ***Benefit of the practice:*** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- ✓ Students can think outside the box or from diverse perspectives by participating in this activity
- ✓ Improves understanding and helps in breaking down the complex topics into simpler parts

❖ ***Challenges faced in implementation:***

- ✓ Some students struggled with organizing their ideas effectively
