

# RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University  
Accredited by NAAC & An ISO 9001:2015 Certified Institution  
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

## Department of Computer Science and Business Systems

### Academic Year 2024 – 2025 (Even Semester)

**Degree, Semester & Branch** : VI Semester B.Tech CSBS  
**Course Code & Title** : CCD334 Supply Chain Management  
**Name of the Faculty member** : Dr.S.Erana Veerappa Dinesh, ASP / CSBS

### Innovative Practice Description

- **Unit / Topic:** Unit IV / International Logistics
- **Course Outcome:** CO4
- **Activity Chosen:** Class Poll
- **Justification:**

The concept of class poll serves as an effective method to gather immediate feedback, assess student understanding, and encourage active participation. It provides a platform for every student's voice to be heard, especially in larger classrooms where individual input may be limited. Polls can help instructors tailor teaching strategies, identify areas that require clarification, and make data-driven decisions regarding pace and content delivery. Additionally, involving students in decision-making through polls enhances engagement, fosters a sense of inclusion, and promotes collaborative learning environments.
- **Time Allotted for the Activity:** 40 Minutes
- **Details of the Implementation:**

A collaborative and interactive digital learning strategy in which students respond to real-time questions posed by the instructor using the Kahoot platform. This activity promotes engagement, immediate feedback, and participation through technology-enabled polling.

  - **Login – Setup:** The instructor logs into the Kahoot platform and opens a pre-designed quiz consisting of conceptual and opinion-based questions related to the topic "Pricing and Revenue Management". The quiz code is generated and displayed on the screen for student access, as shown in Fig.1.
  - **Join – Respond:** Students are instructed to join the quiz using their mobile phones or laptops by entering the game PIN at <https://kahoot.it>. Each student responds to multiple-choice and true/false questions individually, allowing the instructor to gauge understanding instantly. A sample question with real-time response rates is illustrated in Fig.2.

- **Review – Discuss:** After each question, correct answers and student responses are displayed. The instructor explains the logic behind each answer, and students are encouraged to discuss reasoning briefly with peers. This stage facilitates peer learning and concept clarification.
- **Feedback – Wrap-up:** At the end of the session, overall scores and response statistics are reviewed. The instructor provides feedback on class performance and summarizes key takeaways. A feedback prompt is also shared to collect student opinions on the activity's effectiveness. The winner leader board was displayed. The class poll activity was shown in the fig. 2.

- **CO – PO / PSO mapping:**

| CO   | PO1 | PO2 | PO4 | PO9 | PO10 | PSO3 |
|------|-----|-----|-----|-----|------|------|
| CO 3 | 3   | 2   | 2   | 2   | 3    | 3    |

(1 – Low      2 – Moderate      3 – High)

- **PO / PSO mapped:**

| Innovative practice                  | PO1                                                                                                                                                         | PO2                                                                                                                           | PO4                                                                                                                                | PO9                                                                                                                                                       | PO10                                                                                                                                                | PSO3                                                                                                                                                              |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                      | 3                                                                                                                                                           | 2                                                                                                                             | 2                                                                                                                                  | 2                                                                                                                                                         | 3                                                                                                                                                   | 3                                                                                                                                                                 |
| <b>Justification for correlation</b> | Students apply foundational knowledge to understand how logistics functions like transportation, warehousing, and distribution impact global supply chains. | The activity encourages analysis of real-world logistics issues such as customs delays, freight costs, and route optimization | Students interpret global logistics data from polls and use insights to identify challenges in cross-border supply chain movements | Polling fosters collaboration and peer discussion, allowing students to explore diverse viewpoints and collectively assess logistics performance factors. | The activity enhances the ability to communicate opinions and interpretations effectively based on logistics scenarios presented in the class poll. | By discussing real-time logistics challenges through polling, students apply managerial reasoning and ethical thinking relevant to global supply chain practices. |

### **Reflective Critique:**

#### **❖ Feedback of practice from students and other stakeholders:**

- Many students appreciated the interactive nature of the activity and found it engaging and enjoyable.
- Students shared that the real-time feedback helped them understand the correctness of their answers immediately.
- Faculty observed that students were more attentive and responsive during the Kahoot session compared to traditional quizzes.
- Some students suggested adding more application-based questions for deeper learning and practical relevance.

#### **❖ Benefit of the practice:** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

The use of Kahoot enhanced student engagement and provided an immediate diagnostic of their understanding. It encouraged active participation from even the quieter students, increasing inclusiveness in the learning process. Students gained instant conceptual clarity when questions were discussed after each response round.

#### **❖ Challenges faced in implementation:**

- A minority of students responded randomly without fully analyzing the question due to the time-limited format.
- Monitoring the sincerity of responses and ensuring that all students participated meaningfully was a challenge.
- Time management became tight if discussion after each poll question extended beyond plan.
