

# RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University  
Accredited by NAAC & An ISO 9001:2015 Certified Institution  
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

**Department of Computer Science and Business Systems**

**Academic Year: 2024- 2025(Even Semester)**

**Degree, Semester & Branch: VI Semester B.Tech CSBS**

**Course Code & Title: CW3601 & Business Analytics**

**Name of the Faculty member (s): Mrs.M.Shabana Fathima, AP/CSBS**

## **Innovative Practice Description**

**Unit / Topic: Unit III / Data Mining Modeling**

**Course Outcome: CO3**

**Topic Learning Outcome: 8**

**Activity Chosen: Learning by Teaching**

**Date of Implementation: 29.03.2025**

### **Justification:**

Finding valuable patterns, connections, and insights in large databases requires an understanding of data mining modeling. Students engage in discussions, respond to inquiries, and exchange ideas with their peers as they pretend to be teachers. It enhances the learning process overall by allowing for a variety of viewpoints and methods for managing databases process in addition to reinforcing their own comprehension.

**Time Allotted for the Activity: 35 minutes**

### **Details of the Implementation:**

- Before the class, the teacher, inquired about the students' interest in teaching the data mining modeling and its methods few students expressed their interest.
- Based on their interest Ananda Bharathi N and HariHara Suthan G were given topics on both data mining modeling .
- 15 minutes given to the students to prepare for their teaching role so the topic was given a day before the class.
- Students presented their allocated topics to their classmates
- To keep the class interested, students utilized a variety of instructional strategies. Ananda Bharathi N give the real-world examples of data mining modeling in use, such as business, finance, healthcare and marketing, to demonstrate the practical relevance of the concept. Harihara Suthan G shows the different ideas on each key concepts to recall the process..
- To promote involvement, students were allowed to ask questions to their peers during

the presentation. Because of this, students were able to have conversations and share their perspectives about topic which very important in modeling steps.

**CO – PO / PSO mapping:**

| CO   | PO1 | PO2 | PO4 | PO9 | PO10 | PSO1 | PSO2 | PSO3 |
|------|-----|-----|-----|-----|------|------|------|------|
| CO 3 | 2   | 2   | 1   | 1   | 1    | 1    | 2    | 1    |

**(1 – Low 2 – Moderate 3 High) PO / PSO mapped:**

| Innovative practice                  | PO1                                                                                         | PO2                                                                                                | PO4                                                              | PO9                                                                                | PO10                                                         | PSO1                                                                                                                | PSO2                                                                                                                           | PSO3                                                                                                                          |
|--------------------------------------|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------|------------------------------------------------------------------------------------|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
|                                      | 2                                                                                           | 2                                                                                                  | 1                                                                | 1                                                                                  | 1                                                            | 1                                                                                                                   | 2                                                                                                                              | 1                                                                                                                             |
| <b>Justification for correlation</b> | Apply mathematical concepts to analyze and design solutions related to data mining methods. | Develop the ability to identify engineering problems related to the data collection and gathering. | Analyze the problem to find solutions for data managing issues . | Function effectively as an individual, and as a member or leader in diverse teams, | To communicate effectively on complex engineering activities | To excel in software development, effectively to solve complex computational tasks related to data mining modeling. | Ability to build analytical thinking and communication skills by teaching data mining algorithms for business-focused insights | Ability to demonstrate leadership and ethical collaboration by teaching data mining in real-world or project-based scenarios. |

### Images / Screenshot of the practice:

## **Reflective Critique:**

### **❖ *Feedback of practice from students and other stakeholders:***

- All the students were eagerly listened the class. Students felt they are able to understand the topic.
- The students were able to remember key details and concepts more easily
- The students express that role of a teacher boost their confidence in knowledge of data mining modeling
- Students highlighted that this practice helped them improve their communication skills, such as clarity, organization, and the ability to present complex ideas in a simplified manner.

### **❖ *Benefit of the practice:*** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- Students actively engaging in teaching their peers gain a more profound understanding of the mining process steps
- Actively participating in the teaching process helps students remember key details and concepts better compared to passive learning methods
- This activity helped the student to improve communication skills.
- Students spent their time in self-learning.
- This activity encouraged the students to share their knowledge with others.

### **❖ *Challenges faced in implementation:***

- Effectively motivate students who are not participating in the activity due to shyness, fear of public speaking, or lack of confidence. Motivate the students to overcome their shyness and engage in active learning.
- Implementing Learning by Teaching required additional time compared to traditional teaching methods. Planning and executing interactive teaching sessions was challenging.
