

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering
Academic Year: 2019- 2020 (Odd Semester)

Degree, Semester & Branch: V Semester B.E. CSE
Course Code & Title: CS8591 Computer Networks
Name of the Faculty member: Mrs.M.Swarna Sudha

Innovative practice: Role play

Topic: Wireless LANS(Hidden and Exposed Terminal)

Date: 22.07.2019

Objective of the activity:

- O1: To make students identify appropriate network type and media.
- O2: To make students to explore realistic situations by interacting with other people in a managed way in order understand the concepts.
- O3: To encourages creativity and imagination.

Justification for choosing the particular topic:

- Student feels difficult to understand the topic hidden and exposed terminal which cannot be explained as a concept, student have to imagine the situation how the terminal in the wireless media behavior.
- A role play places the learner into a learning situation closely resembling the real life environment in which the desired behavior will be exhibited.

Strategy for Team Formation: Students were chosen based on their exposed skills. Only girl students who can represent the ideas were chosen.

Use of role play

- It's most useful to help students to understand for unfamiliar or difficult concepts by resembling the real life environment.
- Other students can feel the situation which makes the students to understand concepts.
- It spark brainstorming sessions, to improve communication between team members, and to see problems or situations from different perspectives.

Activity :

- To start the process, gather students together, introduce the problem, and encourage an open discussion to uncover all of the relevant issues. This will help people to start thinking about the problem before the role-play begins. I made sure that everyone is clear about the problem.
- Teacher Identify the various roles involved in the scenario. Once we have identified these roles, allocate them to the student involved in the concepts. And Teacher insisted that they should use their imagination to put themselves inside the minds of the people that they're representing. This involves trying to understand their perspectives, goals, motivations, and feelings when they enter the situation.

Observations made:

Based on their performance in role play the following observations were made.

- Students can easily visualize the working of wireless nodes and how information exchange and collision happens and how it can be solved .
- Some need more clarification on the exposed terminal which was explained by using Animated PowerPoint.

**Reflective Report:****Pre-implementation Reflection**

- Some students not willing to participate or may not exhibit the skills that may be necessary for the execution of the role playing activity.
- Very less number of students were involved in the activity.
- Some of the students were not actively involved in this activity.

Steps taken for address the challenges:

- Students who refuse to participate may serve as observers and share their thoughts and perspectives at the end.
- Allow many students to represent the ideas and concepts of the topics.
- Personally motivated some students by asking some simple question which made them to actively participate in activity.

Post Implementation reflection:

- Students were able to identify the problems in wireless media. .
- Students were able understand the concepts of exposed terminal and hidden terminal problems
- All the students enjoyed the activity.
- Students can easily remember the concepts of Wireless LANs

CO – PO mapping:

	CO1	CO2	CO3	CO4	CO5	CO6	CO7	CO8	CO9	CO10	CO11	CO12
O1	3	2	1	2	1	1	2	1	1	1	1	2
O2	3		1						2	2		1
