

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering
Academic Year: 2019 - 2020 (Odd Semester)
INNOVATIVE PRACTICES

Degree, Semester & Branch: V Semester B.E. EEE

Course Code & Title: CS8392 Object Oriented Programming

Name of the Faculty member: Mrs. N. Nithya

Active Learning Strategy: Random Name Picker

Topic: Strings

Date: 09.08.2019

Random Name Picker:

Random Name Picker is an activity from classTools.net for interactive classroom sessions. This makes the class interactive and can be used to revise the topics.

URL: https://www.classtools.net/random-name-picker/2_icbRe8

Learning Objectives:

Students should be able to demonstrate conceptual understanding on String methods.

Reason for choosing the particular topic:

The **String class** has plenty of methods for the students to remember, understand and apply for different applications. A fun filled & visually interesting activity will definitely bring their focus and attention. To engage students in revision of the String methods after lecture session, random method name picker activity is one of the best tools from classtools.net.

How we implemented Random Name Picker:

Random Name Picker looks like a spinning wheel. The course instructor has used the random name picker to contain the various String methods in Java as shown below.

Screenshot of the random “method” name picker

The course instructor asks a student to come forward and click to spin the wheel. On spinning the wheel and a random method will be displayed.

The student then explains the functionality of the method displayed with an example code to all the other students. Once the student explains the functionality, the method is removed from the spin wheel to avoid repetition. This helps in interactive revision on the topic.

Learning Outcomes:

Students were able to demonstrate conceptual understanding on String methods.

Apart from engaging students actively in learning, this activity improves retaining or remembering the methods for a long time.

Reflective Critique:

- On seeing the spinning wheel type of activity students were too excited to participate.
- Students offered fullest co-operation & actively participate in learning.
- When a student was unable to recall a method, a volunteer from audience explains the purpose of the method.
- This activity brought out a curious child in them and provided a happy & cheerful learning environment.

- Many students responded that they wanted to learn more when the session ended and this would be a good start for continuous learning.

Learning Outcomes/ Program Outcomes	PO1	PO2	PO6	PO9	PO10	PO12
<i>LO: The students were able to demonstrate conceptual understanding on String methods</i>	3	2	1	3	2	2
