

Department of Computer Science and Engineering.
Academic Year: 2023- 2024(Odd/~~Even~~ Semester)

Degree, Semester & Branch: B.E, V & CSE

Course Code & Title: CS3551& Distributed Computing

Name of the Faculty member (s): A. Sofia Thanga Mary, AP/CSE

Innovative Practice Description

- **Unit / Topic: Unit I / Global state of Distributed System**
- **Course Outcome: CO 1**
- **Topic Learning Outcome: TLO1**
- **Activity Chosen: Refelection**
- **Justification:**
The concept of Global State of Distributed System was taught in the class, to identify the learning level of students about a global State this activity was given.
- **Time Allotted for the Activity: 15 Minutes**
- **Details of the Implementation:**
 - The topic Global State of Distributed System was given to students as shown in Figure 1. The class students paired with 30 groups.
 - Each student discussed with their pairs for 10 Minutes.
 - After that, the students were asked to present the topic as shown in the Figure 2.
 - shamiksta team explained the concept Global State of Distributed System clearly.
- **Images / Screenshot of the practice:**

Fig 1: Discussion on the topic Global State of Distributed System

Fig 2: pair of student (Sample) explained the concept to the class

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	1	2	-	1	3	3	2

(1 – Low 2 – Moderate 3 – High)

- **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO10	PO12	PSO1	PSO2	PSO3
	3	2	1	2	1	3	3	2
Justification for correlation	Apply theory and principles of Computer Science and Engineering to know the concept of global State	The students will able to analyze the complex problems by distributed computing	Solve the complex problems by distributed computing using various design alternatives	The students can be able to explore the technical knowledge of the model of distributed computing using global state	The students will be able to explore the historic evolution of distributed computing	As knowledge about the global state in distributed system technique used in mobile application development.	The concepts of global State can be used in IoT, Cloud computing and cybersecurity	The students exhibit knowledge to solve big data analysis using distributed computing

Reflective Critique:

- **Feedback of practice from students and other stakeholders:**
 - The students are actively participated in the activity.
 - The student said this activity helped to think and recall information and improved our communication skills.
- **Benefit of the practice:** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)
 - The students understand well about global State in distributed systems.
 - Interaction with the faculty member and their class mates during the class was effective.
 - The fear of students was reduced compare when discussing with their friends.
 - It helps the students to think individually about a topic or answer to a given question.
 - With the help of this activity, each student can get clear idea about global state in distributed systems.
- **Challenges faced in implementation:**
 - Some of the students difficult to understand the concept initially, after discussing with their pair they understood clearly.
 - Some students are hesitating to come in front of a class.
 - The time limit exceeded 15 minutes
