

Department of Computer Science and Engineering

Academic Year 2022– 2023(Odd Semester)

Degree, Semester & Branch: III Semester B.E. ECE-‘A’ Section

Course Code & Title: CS3353 C Programming and Data Structures

Name of the Faculty member (s): Dr.V. Anusuya, Assoc. Prof/CSE

Innovative Practice Description

- **Unit / Topic:** Unit 1 / Functions
- **Course Outcome:** The student will be able to develop C programs for solving technical Application
- **Topic Learning Outcome:** TLO3.
- **Activity Chosen:** Cross word Puzzle
- **Justification:**
 - To identify the understanding level of a student in Functions, a game based activity was chosen to do the revision of topic instead of carrying out regular quiz tests.
- **Time Allotted for the Activity:** 20 Minutes
- **Details of the Implementation:**

A crossword is an interesting word puzzle activity which helps the students to develop a problem-solving skill.

The activity was conducted in a classroom for duration of 20 minutes. The students were given with a crossword puzzle of 9 questions in a paper. They have to think and provide the answers in the given puzzle.

The students answered the questions as shown in figure 3 and 4. Sample questions and answers were shown in figure 1&2. The answers for the wrong questions were discussed immediately to make them to know the answer of all the questions.

CO – PO / PSO mapping:

CO	PO1	PO2	PO3	PO9	PO10	PO12	PSO1
CO1	3	2	1	1	2	1	1

(1 – Low 2 – Moderate 3 – High)

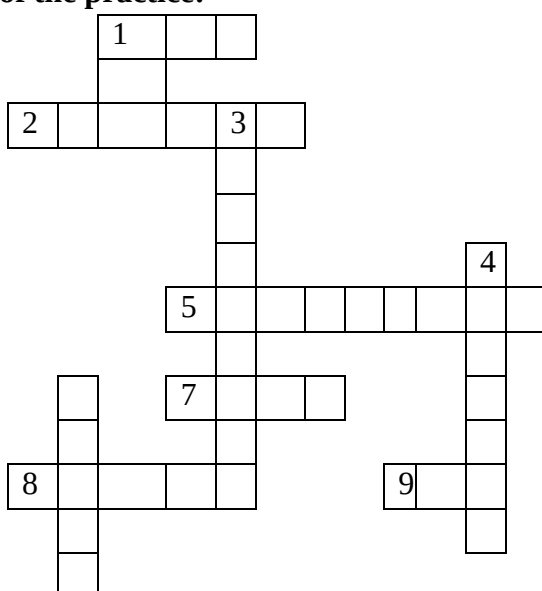

- **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO10	PSO1
	2	2	4	1
Justification for	The basic	The basic of	The	The student will be

correlation	knowledge of engineering fundamentals is necessary to understand the concept of Functions	C programming concept using functions is necessary to incorporate function concept in C Programming	student will be able to write C program using the concept of functions	able to apply C programming concepts using functions in emerging trends in Information and Communication Technology
--------------------	---	---	--	---

• **Images / Screenshot of the practice:**

Across	Down
1. Default return type of function definition is _____	1. What is the return type of the function with prototype: "int func (char x, float v, double t);"?
2. The keyword used to transfer control from a function back to the calling function is _____	3. A function which calls itself is called a _____ function.
5. The function _____ is the part of a function definition that shows the function name, return type, and parameter list	4. The function that actually created from a call to a template function is called
7. Functions have _____ scope	6. When a function is recursively called the automatic variables are stored in a _____
8. The default parameter passing mechanism is call by _____	1. What is the return type of the function with prototype: "int func(char x, float v, double t);"?

9.No of values function can return

3.A function which calls itself is called a _____function.

Figure 1: Questions on storage classes

ANSWER KEY:-

[illegible]

Figure 2: Answers of Functions

St. Karmatha

Q R E T U R V

C U R O T Y P E

S F I L E

T A C K

O N D

ACCESS:

1. Default method type of function definition is _____
2. The keyword used to transfer control from a function back to the calling function is _____
3. The function _____ is the part of a function definition that shows the function name, parameter type and parameter list.
4. Functions have _____ scope.
5. The default parameter passing mechanism is call by _____.
6. No. of values function can return _____.

8. The default parameter passing mechanism is call by.

9. No. of value function can return

DOWN:

1. What is the return type of function with prototype: "int fun(char x, float y, double z);?"
3. A function which call itself is called a function.

FUNCTIONS:

- a. The function that actually created from a call to a template function is called.
- b. When a function is repeatedly called the automatic variables are stored in a

Ques:
1. What is the return type of the function with
prototype: "int func (char x, float v, double b);"
2. A function which calls itself is called a
function.
3. The function that actually executes from a call to a
template function is called
4. When a function is recursively called the automatic
variables are stored in a

Ques:
1. What is the return type of the function definition for int
2. The keyword used to transfer control from a function
back to the calling function is return
3. The function declaration is the part of a
function definition that shows the function
name, return type and parameter list
4. Functions have steps.

Figure 4. Sample Answers of students

• Reflective Critique:

• **Feedback of practice from students and other stakeholders:**

The students are participated but they difficult to find out the answer. Some of the students written the answer and some student hesitate to write the answer. They asked to revise the concept of the topic functions.

• **Benefit of the practice:** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- From that we can identify the advanced learner and slow learners.

- This activity helped the faculty to think the understanding level of the student and make every student to understand clearly about the functions.

❖ ***Challenges faced in implementation:***

Some of the students couldn't able to recall the important terms and definitions while doing the activity. At the end of the class the concept of function revised once again.
