

Department of Computer Science and Engineering
Academic Year 2021– 2022(Odd Semester)
Degree, Semester & Branch: VII Semester B.E. Civil, EEE, ECE
Course Code & Title: OCS752 Introduction to C Programming
Name of the Faculty member (s): Dr.V.Anusuya, Assoc.Prof/CSE
Innovative Practice Description

- **Unit / Topic:** Unit 4 / Recursive Functions.
- **Course Outcome:** The student will be able to develop simple applications using functions
- **Topic Learning Outcome:** TLO7.
- **Activity Chosen:** Flipped Class Room
- **Justification:**
 - Flipped Classroom is a pedagogical approach in which the conventional notion of classroom based learning is inverted, so that students are introduced to the learning material before class, with classroom time then being used to deepen understanding through discussion with peers and problem solving activities.
- **Time Allotted for the Activity:** 15 Minutes
- **Details of the Implementation:**
 - The students were given the materials one week before the conduct of this activity and they were asked to prepare for the presentation. Then on the day of the activity, the assigned students for this activity were asked to present the topic and their doubts were also cleared during that presentation.

The sample implementation as shown in figure1

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO12	PSO1	PSO2
CO2	2	3	3	3	3	2

(1 – Low 2 – Moderate 3 – High)

- **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO12	PSO1	PSO2
	2	3	3	3	3	2
Justification for correlation	The basic knowledge of engineering fundamentals is necessary to develop C programs	Basic C programming concepts using recursive functions are used in analysis of	The student will be able to develop complex problems using C		The student can be able to apply C programming using recursive functions concepts in emerging trends in	The student can be able to develop C programs using recursive

	using recursive functions	complex engineering problems	program with recursive functions		Information and Communication	functions are used for developing embedded system

- **Reflective Critique:**

- ❖ ***Feedback of practice from students and other stakeholders***

- Students are learned few things individually that lead to self-learning. They actively involved in this session rather than it being a one-way communication

- ❖ ***Benefit of the practice:*** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- ❖ Students can able to understand Recursive function clearly.

- ❖ The video learning is eye-catching, it is useful when quickly getting and holding the audience's attention.

- ❖ ***Challenges faced in implementation:***

- ❖ Initially students were confusing the recursive procedure concept and program. It was somewhat challenging to explain to the slow learners initially, later on after explaining the same through demonstration, it was understood by the students clearly
