

RAMCO INSTITUTE OF TECHNOLOGY

Department of Computer Science and Engineering

Academic Year: 2019-2020(Odd Semester)

INNOVATIVE TEACHING PRACTICES

Degree, Semester& Branch: I Semester B.E. CSE

Course Code & Title: GE8151 Problem Solving and Python Programming

Name of the Faculty member: Mrs.M.Swarna Sudha

Topic: Swapping of two number

Date:17.08.2019

Practice's followed: Role Play

Type of Learning: Active Learning

Learning Objectives:

Objective	Statements
O1	1. To make the students to understand the basics of problem solving

Purpose of Role play:

- To Encourages creativity and imagination.
- Pretend play helps students to naturally develop and use their cognitive abilities and skills.

Meaning of Role Play Role-play is a technique that allows students to explore realistic situations by interacting with other people in a managed way in order to develop experience and trial different strategies in a supported environment.

Role play is an educational technique in which people spontaneously act-out problems of human relations and analyze the acting with the help of other role players and observers.

Justification for chosen the topic:

First problem solving program students are learning .It is very important to make them to understand the logic and at same time to make interest in learning programs

Implementation of Role Play :

Three students are picked from the class. One is provided with the bottle of water, second student is provided with bottle of juice and third student is with empty bottle. Asked them to interchange content of juice and water in the respective bottles itself with the help of empty bottle.

After few minutes student started by transferring the water to the empty bottle and next transferring of juice to the emptied bottle (initially contained water) and at last water is transferred to the juice bottle. This made the student to understand the swapping of two numbers with help of third variable.

This activity cultivates student's problem solving ability to the next extends

OUTCOME:

- Finally, gave a better understanding problem of swapping of two numbers and to increase problem solving ability

Objective-PO Mapping

Objective	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
O1	3	3	2						3	2	1	1

Reflective Report:

Pre-implementation Reflection

- Very less number of students were involved in the activity.
- Some of the students were not actively involved in this activity.

Steps taken for address the challenges:

- Allow many students to represent the ideas and concepts of the topics.
- Personally motivated some students by asking some simple question which made them to actively participate in activity.

Post Implementation reflection:

- Students were able to identify the problems in wireless media. .
- Students were able understand the concepts of problems solving
- All the students enjoyed the activity.
- Students can easily remember the logic of the programs
