

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering
Academic Year: 2019 - 2020 (Odd Semester)
INNOVATIVE PRACTICES

Degree, Semester & Branch: V Semester B.E. EEE

Course Code & Title: CS8392 Object Oriented Programming

Name of the Faculty member: Mrs. N. Nithya

Active Learning Strategy: Reflection

Topic: Creating own exceptions

Date: 19.08.2019

Reflection:

Reflection activity is conducted just after the discussion of a topic, so that students can assess their own understanding of the material and perhaps the faculty member can assess students' understanding, too. This also gives them a chance to think about how the material might relate to other material they've studied.

Benefit of Reflection:

- Enhancing classroom engagement
- Reflection helps students to assess their understanding on the topic
- Reflection also acts as a feedback mechanism to understand what students have learnt and guides instructor in adjusting the lessons to suit their students' needs.

Course Outcome:

CO3: *The students will be able to build Java applications using exceptions and I/O streams.*

Goal:

Students should be able to demonstrate conceptual understanding of creating own exceptions.

Reason for choosing the particular topic (Method):

There is a famous quote by John Dewey, the famous American educator,

“We do not learn from experience. We learn from reflecting on experience.”

The **reflection on creating own exceptions** will help the students to realize and **self-evaluate** on the understanding level and also will enable the faculty members to provide additional guidance to students who has experienced difficulty in reflecting the concept.

How we implemented Reflection:

- After the discussion of the topic, the students were asked to write what they have understood from the topic.
- The faculty member uses the written material of each student to assess their understanding on the topic.
- The faculty revises the topic based on the assessment.

Learning Outcomes:

The students were able to demonstrate conceptual understanding of creating own exceptions.

Reflective Critique:

- The reflection is conducted after the discussion of the topic and so there was shortage of time.

- Students were able to evaluate/assess themselves when they were able to recall or not recall independently.
- While most of the students were able to reflect on their learning, some of the students had confusions in the concept.
- Reflection helped me to identify the students in the following categories and plan my next session accordingly.

Students who have clearly understood the concept & syntax	Students who have clearly understood the concept but not syntax	Students who need additional clarity on the concept.
---	---	--

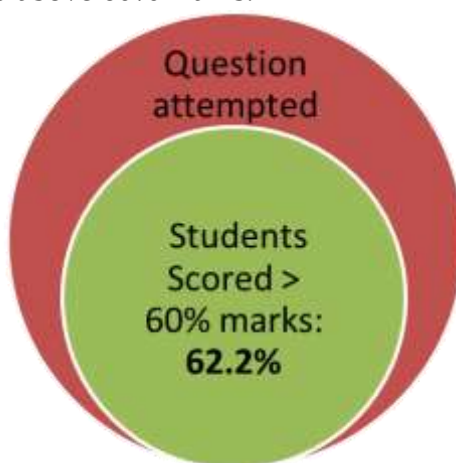

Learning Outcomes/ Program Outcomes	PO1	PO2	PO6	PO9	PO10	PO12
<i>LO: The students were able to demonstrate conceptual understanding of creating own exceptions</i>	3	2	1	2	1	2

Significance of results:

Internal Assessment Test II (IAT II) was conducted on 09.09.2019. The impact of the innovative practice on creating own exception is analyzed in the table below.

Total No. of Students present for IAT II	50
No. of students attended Q.No. 6a in IAT II	37
No. of students scored above 60% marks in Q.No. 6a	23
Percentage of students scored above 60% marks in Q.No. 6a	62.2%

The following diagram illustrates the percentage of students who attempted the question to the students who have scored above 60% marks.
