

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering

Academic Year: 2019 - 2020 (Odd Semester)

Degree, Semester & Branch: III Semester B.E. ECE-'A'

Course Code & Title: EC8393 & Fundamentals of Data Structures in C

Type of Activity: Reflective Learning

Topic: Polynomial Addition

Date: 03.09.2019

Objectives:

O1: To make the students to learn and explore the application of linked list

Justification for choosing the particular topic:

Polynomial addition is the application of linked list. To program in data structure for polynomial addition felt difficult first time for students. In order to address the doubts and to know the level of understanding of the students, they were insisted to honestly describe the concepts that they didn't understand well.

Activity Description:

Reflective Learning is a process where teachers think over their teaching practices, analyzing how something was taught and how the practice might be improved or changed for better learning outcomes.

The activity is conducted as the part of teaching. The students wrote their doubts and topics which they are not clear. The papers are collected by the teacher and discussed the doubts in next class. The teacher also provided a written explanation on the papers collected from the students for future reference.

Why is reflection important in teaching?

Teachers who explore their own teaching through critical reflection develop changes in attitudes and awareness which they believe can benefit their professional growth as teachers, as well as improve the kind of support they provide their students.

```
t = t → next;  
t → next = new  
new → next = NULL;  
return p;
```

what is the need of t

To traverse
from 1st to last
we just store it in
temp variable

Polynomial Addition. 953618106001.

1) Why we declare $\text{poly } t = p_3;$ in display function?

To display all the polynomials in P_3
we have to traverse from 1st to last. So the
polynomial 1st stored in t. ~~for next~~

Polynomial addition

953618106018

1. why are we declaring poly instead of void / int main? good

possible to declare void & int but we
created new data type using typedef.

Polynomial addition.

In poly append t) function, in if condition, why
we are returning new and not p? good

if the node is created first

time only with new then the

new is return otherwise p.

- 953618106008

Reflection critique**Observation Made:**

- Some of the students finding difficulties for understand the typedef in c.
- Some of the students unaware of the basic operations in linked list, so felt very difficult to understand the polynomial addition using linked list.

Post Implementation:

- Activity helps the teacher to analyze, evaluate and improve their own learning.
- From the observation, it helps to develop creative thinking skills for the student.

Steps taken:

- Explanation is written in all the students' paper and common doubts among students are discussed and explained.

Relevance of Program Outcomes

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
O1	2	2		2								1
