

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering
Academic Year: 2019- 2020 (Odd Semester)

Degree, Semester & Branch: VII Semester B.E. Computer Science and Engineering.

Course Code & Title: CS6703 Grid and Cloud Computing

Name of the Faculty member: M.Gomathy Nayagam, Asst.Professor (Sr.Gr.)/CSE

Innovative practice: Class Polling

Type of Learning: Active Learning

Topic: Evolution of Distributed Computing

Date: 05.07.2019

Learning Objectives:

Objective(s)	Statements
O1	Students will able to get the knowledge in the architecture of Grid and Cloud computing.
O2	Students will able to improve their thinking
O3	To make the students to become good and rapport involvement in the class room

Justification for the Topic:

Students were already studied “Distributed Computing” previously. In order to recollect the concepts and its evolution of distributed computing, this topic is chosen. From the evolution of distributed computing, students can easily learn about the basic concepts and architecture of grid and cloud computing.

Uses of Class Polling:

- It helps the students to receive open-ended questions, making the Q&As more interactive and engaging.
- It teaches the students to develop their critical thinking and involve them in the class discussion forum

Procedure to use Class Polling:

- Created the group in the classroom
- Group members interacted among themselves once the question was posted on the projector by the instructor and the students answered for the questions.

Activity:

- Course instructor allotted one minute time to individual group to think about the correct answer of the questions which was displayed on the projector.
- Students were discussed with their group members to choose the correct answer.

- Once the group had identified the correct answer for the question within one minute, one of the students from the group answered to the question is shown in fig.1.
- Course instructor appreciated the group, once they answered correctly. Otherwise, course instructor discussed the correct answer for the question to the students.

Fig.1. One Student from group answered for the Class Poll.

Outcome

The students are able to gain the knowledge to differentiate distributed, parallel, grid and cloud computing. They recapped the concepts of the evolution of distributed computing.

Objective and PO Mapping

Objectives	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
O1	3	1										
O2	3	2							2	2		1
O3	3								2	3		2

Reflection Critique

Challenges

- Making every student to answer the questions.
- Avoiding collision between the groups while answering the question.

Steps taken for address the challenges

- Student has to answer the questions only after the approval of the course instructor.

- A small token of appreciation were given to the students those who have answered correctly.

Post implementation reflection

- All the students were interestedly participated
- They felt, this class polling session helped them to brush-up their mind during the continuous listening of the class and recap the concepts of distributed computing and its evolution.
