

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University

Accredited by NAAC & An ISO 9001:2015 Certified Institution

NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Computer Science and Engineering

Academic Year 2024 – 2025 (Odd Semester)

Degree, Semester & Branch: BE,III Semester&ECE-‘B’

Course Code & Title: CS3353 & C Programming and Data Structures

Name of the Faculty member (s): Mrs.K.Priya

Unit / Topic: Unit II / Reading and writing files

Course Outcome: CO2

Topic Learning Outcome: TLO6

Activity Chosen: Five Minutes Paper

- **Justification:**

- The Five-minutes paper is a instructional strategy that uses a short writing task to assess learner understanding of course material. It is usually assigned with an open-ended question(s) in the last 5 – 10 minutes of class
- Reading and writing files are an important topic needed to know depth in file handling.
- In order to have a recap of Reading and writing files this activity is chosen.

- **Time Allotted for the Activity:** 10 Minutes

- **Details of the Implementation:**

- The faculty explained the concept of file handling in C.
- The faculty asks the questions to the students as,
 - ☐ What was the most important thing you learned in class, today?
 - ☐ What was the most confusing point in class, today?
 - ☐ How can you apply the concepts learned today, in your daily life?
 - ☐ What examples did I use today that helped you the most?
 - ☐ What is the main application of the content we discussed today?
- Students were answered from the topic of reading and writing files on paper within a minute.
- The faculty collected the sheets, and any inaccuracies in content were addressed in the subsequent session.
- This activity serves as an effective gauge of students' understanding of concepts, their engagement, and participation in the lesson.
- In the next class, faculty discussed about the questions asked from the topic file handling.
- What was the most important thing you learned in class, today?
 - a. The most important thing about file handling was the distinction between reading from and writing to files. Understanding how to open a file in different modes—like read (r), write (w), and append (a)—was crucial. 90% of the Students replied this answer.
 - b. Use the open() function with the mode set to 'r' (read) and 'w' (write) to create a new file or overwrite an existing one, or 'a' (append) to add to an existing file..10% of the Students replied this answer.

- What was the most confusing point in class, today?
 - a. The most confusing point in class today was understanding the different file modes and their implications. 85% of the Students replied this answer.
 - b. The most confusing point was understanding the difference between `fprintf()` and `fwrite()`. 15% of the Students replied this answer.
- How can you apply the concepts learned today, in your daily life?
 - a. The concepts learned today can be applied in various real-world scenarios, such as creating log files for software applications, reading configuration files, or processing data files for reports. 95% of the Students replied this answer.
 - b. Understanding how to read and write files enables me to create backups of important documents by copying their contents to new files. 5% of the Students replied this answer.
- What examples did I use today that helped you the most?
 - a. The example that helped the most was the one where we demonstrated writing and reading a simple text file using `fprintf()` and `fscanf()`. It made the process of handling text files clear and practical. All Students replied this answer.
- What is the main application of the content we discussed today?
 - a. The main application of today's content is managing data persistence through file storage. 95% of the Students replied this answer.
 - b. File Storage involves creating, reading, writing, and appending to files. 5% of the Students Replied this answer.

• **CO – PO / PSO mapping (specific to this activity):**

CO	PO1	PO2	PO3	PO9	PO10	PO12	PSO1
CO5	3	2	1	1	2	1	2

(1 – Low 2 – Moderate 3 – High)

• **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO9	PO10	PO12	PSO1
Justification for correlation	The students will be able to use basic knowledge of engineering fundamentals to develop C programs using advanced features such as structures..	The students will be able to use the concepts of C Structures, pointers and File handling in analysis of complex engineering problems	The students will be able to use advanced C programming concepts in designing solutions for complex engineering problems.	Students will be able to write C program individually using advanced C Concepts such as Structure and pointers.	Students will be able to execute and present C programs using Structure, pointers concepts in C	Student will become aware of the need for lifelong learning and the continued upgrading of technical knowledge using advanced Concepts of C.	Students will be able to apply C programming concepts in emerging trends in Information and Communication Technology

Fig 2: Sample Five-minutes paper activity by M.Mohamed Tariq

Reflective Critique:**❖ *Feedback of practice from students and other stakeholders:***

- The group exercise was quite useful because it provided hands-on experience with writing and reading files. By working in pairs, we were able to see different approaches to file handling and learn from each other's mistakes and solutions. Students felt it will be helpful while preparing for exam
- It helped reinforce the concepts discussed in the lecture and clarified the practical applications of file handling functions.

❖ *Benefit of the practice:*

- Making students think critically about what they've learned.
- Get a sense of what the students have learned, where there might be gaps in their knowledge

❖ *Challenges faced in implementation:*

- Few students made a mistake in writing the concept.
- It took much time for some students to complete the activity.
