

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering
Academic Year: 2019-2020(Odd Semester)

INNOVATIVE TEACHING PRACTICES

Degree, Semester& Branch: III Semester B.E. ECE

Course Code & Title: EC8393 Fundamentals of Data Structures in C

Name of the Faculty member: Mr. C.A.Yogaraja

Date: 15.07.2019

Topic: Strings

Lecture No.: 11

Practice's followed: A Minute Paper

Ending a class with short writing assignments about the delivered lecture is a powerful way to assess the degree to which students understand. The students were asked to write about,

“What was the most important thing you learned during this class?”

“What questions remained unanswered?”

“Summarize the main point of today’s lecture in one sentence.”

This will give some insights as how we need to modify the content for next class.

Getting Student’s view about String:

At the end of the regular session on string operations, students were asked to write individually about the topic discussed, how much you have clear idea about it? What are the areas that are un-cleared? Any further session needed for the topic? Is anything you think silly to ask? If so, mention it.

Few students are still in the complexity circle for raising their unanswered questions about the session directly towards instructor. This activity reveals the students understanding, mentality, involvement and knowledge about the particular topic.

OBSERVATION:

Contents	Percentage of Understanding
About String	33/35=94.28%
String functions	35/35=100%
Built-in	30/35=85.71%
User Defined	23/35=65.71%

OUTCOMES:

When students realize that the instructor is responding to their concerns, confusions, and questions rose, they will be motivated to participate enthusiastically in the following subsequent classes. It also gives the insight about how much explanation is needed to make students understand.
