

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering
Academic Year: 2019 - 2020 (Odd Semester)

Degree, Semester & Branch: I Semester B.E. Civil Engineering & EEE

Course Code & Title: GE8151 & Problem Solving and Python Programming

Name of the Faculty member: Ms.P.Jothi Thilaga, AP/CSE

Date & Venue: 31.08.2019 & CRIV

Innovative Practice: Minute Paper

Topic: Fruitful functions and Recursion

Type of Learning:

Active Learning

Learning Objectives:

O1: To make the students to understand the function concept and develop python programs using function and recursive function.

Description:

Minute paper is a short writing activity within the classroom in which students generate answers in response to questions asked by the teacher regarding the concepts taught in class. These questions stimulate a student to reflect on the lesson taught and learned and provides feedback regarding their understanding which helps the teachers to plan ahead for the next class. Its major advantage is that it provides rapid feedback on whether the instructor's main idea and what the students perceived as the main idea are the same.

Uses of Minute Paper:

- This activity provides a conceptual bridge between successive class periods.
- Improve the quality of class discussion by having students write briefly about a concept or issue before they begin discussing it.

Justification for chosen the topic:

Functions topic is one of the most important concepts in python programming, which makes the user to write codes in a simpler manner. This activity makes the students to get a sound knowledge in function concept.

Implementation of Minute Paper:

At the end of the class, students were asked to write answers for the some questions. These questions includes the most important key terms, the students have to learn in that topic. This activity shows whether the students can able to understand the specific topic and their involvement the particular class.

Questions

1. Write the syntax for lambda function.
2. _____ function returns the ASCII code of the character.
3. Give the output of the following:
`chr(71)`
4. Every recursive function must have a return value – True / False

5. What will be the output of the following Python code?

```
def maximum(x, y):  
    if x > y:  
        return x  
    elif x == y:  
        return 'The numbers are equal'  
    else:  
        return y  
print(maximum(2, 3))
```

953619103011

1. Syntax :
lambda arguments: expression

2. ord() function

3. Output: G

4. False

5. output: 3

953619103011

1. Syntax: lambda arguments: expressions

2. ord() function

3. Output: G

4. False

5. output: 3

Outcomes:

- Use of minute papers in the classroom actually increases attentiveness in the class and also improves the students' skill of writing and critical analysis of the topics.
- This activity reflects the understanding and involvement of the students in the particular topic.

Relevance to POs

Objective	PO1	PO2	PO5	PO9	PO12
O1	3	3	2	3	2

Reflective Report:**Identified Problems**

- Some students are hesitated and lack to share the concepts that they learnt in the class.

Initiatives to address the problems

- Make the students to know the impact and importance of sharing their views by answering the given questions related to the topic and made them involve in the activity.
- Addressed the students that the activity is not a kind of evaluation methodology to assess.

Post-implementation

- Students were actively participated in this activity.
- From this activity, the muddiest parts in the concept were identified and more examples and coding practices were given for better understanding.
