

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering

Academic Year: 2019 - 2020 (Odd Semester)

Degree, Semester & Branch: V Semester B.E. CSE

Course Code & Title: CS8501 Theory of Computation

Practice's followed: Learning Teams

Type of Activity: Collaborative Learning

Topic: Post's Correspondence Problem & The Class P and NP

Date: 05-10-2019

Objectives:

O1: To help the students to understand the concepts Undesirability, P and NP problems

Justification for chosen the topic:

Post's correspondence problem is the essential to understand undesirability. To familiarize the students on the above topic set of problems and questions were given. This activity helps the students to understand the concept deeply through sharing ideas with their team members.

Activity Description:

For this type of learning, students are divided into groups at the beginning of the term. For each group set of problems and questions were given. The team members work together for finding the answers. This activity is conducted on CC II Laboratory and students were instructed to use course materials and online sources for discussion with team members. Finally the answers were discussed.

Steps in Learning Teams:

- Explain the task clearly
- Set ground rules for group interaction
- Allow sufficient time for group work
- Let students ask questions
- Clarify your role as facilitator

Reflection critique**Post Implementation:**

- Students enthusiastically participated in the activity and wrote answer well.
- Some of the student teams raise the question on solving steps in Post Correspondence Problem.

Relevance of Program Outcomes

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
O1	2	3	1	2					2			2
