

Department of Computer Science and Engineering

Academic Year 2022– 2023(Even Semester)

Degree, Semester & Branch: VI Semester B.E. CSE

Course Code & Title: CS8603 & Distributed Systems

Name of the Faculty member (s): Dr.V. Anusuya, ASCP/CSE

Innovative Practice Description

- **Unit / Topic:** Unit 4 / Wait freedom, Register hierarchy and wait-free simulations.
- **Course Outcome:** The student will be able to describe the features of peer-to-peer and distributed shared memory systems.
- **Topic Learning Outcome:** TLO10.
- **Activity Chosen: Learning by Doing**
- **Justification:**
- The Wait freedom, Register hierarchy and wait-free simulations is an important concept in the distributed shared memory. To identify the learning level of students about the distributed shared memory model this activity was given.
- **Time Allotted for the Activity:** 20 Minutes
- **Details of the Implementation:**
 - The topic was given one week before to the student Mr.Paranthaman.
 - Required materials was sent to the students.
 - The demo for the activity before the implementation of learning.
 - Finally he taught the topic as shown in the figure 1.
- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO10	PO12	PSO1	PSO2	PSO3
CO4	3	1	1	1	2	2	2	3	3	2

(1 – Low

2 – Moderate

3 – High)

• **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO4	PO5	PO10	PO12	PSO1	PSO2	PSO3
	3	1	1	1	2	2	2	3	3	2
Justification for correlation	The basic knowledge of engineering fundamentals is necessary to get the knowledge Distributed shared memory	The student should identify the basic knowledge of Distributed shared memory for solving computer engineering problems	The student will be Provide the solution for complex problem with the knowledge of Distributed shared memory in distributed systems	The student will be able Use the knowledge of Distributed shared memory in distributed computing	The student will be able to use the modern tool for implementing distributed shared memory	The student doing the problem by individual	The students improve communication by sharing knowledge in the form of presentation	The concept of Distributed shared memory is important in mobile application development	The student will be able to provide the distributed solution using the knowledge of Distributed shared memory	The student will be able to solve AI and big data analytics problems

- **Images / Screenshot of the practice:**

Screen shots

Figure 1. Presentation of Mr R.Paranthaman

- **Reflective Critique:**

- **Feedback of practice from students and other stakeholders:**

- The students felt that they are able to understand the topic as it was taught by their classmate..
- They felt comfortable to ask doubts while teaching.
- The student who took the class said it helps in improving self learning skills.

Benefit of the practice: (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- As the student engages in teaching the new subject, it improves the technical knowledge, confidence, communication.
- Peer to peer learning activity makes the students get good wrapo
- The students can share their acquired knowledge.

Challenges faced in implementation:

- As the activity involves only one student, unable to persuade all students to engage in self learning.
- Effectively motivate students who are not participating in the activity by addressing the benefits of self-learning.
