

Department of Computer Science and Engineering
Academic Year 2021– 2022(Even Semester)

Degree, Semester & Branch: B.E – II Semester CSE

Course Code & Title: CS3251 Programming in C

Name of the Faculty member (s): Ms.G.Sakthi Priya, AP/CSE

Innovative Practice Description

- **Unit / Topic: Unit IV / Recursion**
- **Course Outcome: CO3**
- **Topic Learning Outcome: TLO7**
- **Activity Chosen: Strip Sequence**
- **Justification:**
 - Strip sequence is an activity of arranging a jumbled order sentences into correct order.
 - Recursion is defined as function that calls itself. In the program, same function will be available inside the main() and to the function itself. To test the student's understanding of recursion programming, the strip sequence activity is chosen
- **Time Allotted for the Activity: 05 Minutes**
- **Details of the Implementation:**
 - After the completion of recursion topic, the strip sequence activity was conducted.
 - The students were asked to arrange the jumbled sequence of given program into correct order.
 - The students were given with the jumbled order sequence and asked to write the correct order.
 - After completion, their sheets were collected and corrected by the faculty member as shown in fig 1.
 - The mistakes were pointed out and corrected.
- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO10	PSO1
CO2	2	1	1	1	1

(1 – Low 2 – Moderate 3 – High)

- **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO10	PSO1
Justification for correlation	This activity helps the students to gain the programming knowledge on recursion	Students will be able to analyse the problem and determine when to apply recursion function	Students will be able provide solution by using recursive functions	Students program skill will be improved as they are involved in rearranging the code they learnt	The recollecting/ remembering and writing skill earned through this activity helps the students in solving problems related to recursion

- **Images / Screenshot of the practice:**

Fig 1: Samples of strip sequence activity sheet

- **Reflective Critique:**

- ❖ **Feedback of practice from students and other stakeholders:**

- Students felt they are able to differentiate between recursive function and normal function
 - They felt that the confidence level to write the recursive function was improved.

- ❖ **Benefit of the practice:**

- As the students are involved in arranging the jumbled order of program into correct order, it helps them to remember it for long time.
 - Understanding and remembering of the topic recursion help the students to solve the problems.
 - This activity helps in testing the understanding level of the students

- ❖ **Challenges faced in implementation:**

- Few students found it difficult to rearrange the given programs in correct order.
 - Few students felt it was bit confusing
