

RAMCO INSTITUTE OF TECHNOLOGY

Department of Computer Science and Engineering

Academic Year: 2019- 2020 (Odd Semester)

Degree, Semester & Branch: VII Semester B.E. Computer Science and Engineering.

Course Code & Title: CS6703 Grid and Cloud Computing

Name of the Faculty member: M.Gomathy Nayagam, Asst.Professor (SG)/CSE

Innovative practice: Warm-up Activities

Type of Learning: Active Learning

Topic: Technologies for Network Based Systems

Date: 10.07.2019

Learning Objectives:

Objective	Statements
O1	Students will able to get the knowledge in the architecture of Grid and Cloud computing.
O2	Students will able to improve their re-collective ability and briefing skills

Justification for the Topic:

Due to the repetition of this topic in university question, course instructor had chosen this topic to be conducted as a warm-up classroom activity for the easy understanding purpose. It will help the students to recollect concepts and capture more points from their peer students.

Uses of Warm-up Activities:

- It helps the students to recap the previous day's class.

Procedure to use Warm-up Class:

- Course instructor asked the student to represent at least two key words which he/she studied earlier class on the board.
- Once he/she wrote the word on the board, he/ she explained more information about the key word that covered in the last class by the course instructor.

Activity:

- Faculty member randomly chosen the students from the class and he asked the particular students to come in front.
- Course instructor asked them to write one key word whichever he/she is having in his/her mind based on the previous class which is shown fig.1.
- He/she came to the board and wrote the keyword on board and narrated one or two points about the keyword is shown in fig.2.

Fig1. Ms.M.Malavika of Final CSE written some keywords on the board.

Fig2. Ms.M.Malavika of Final CSE explained the keywords which are written on the board.

Outcome

The students are able to gain the knowledge in Grid and Cloud computing architecture and the various technologies for network based systems.

Objective and PO Mapping

Objective	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
O1	3	1										
O2	3	1		1			2	1	2	3		1

Reflective critique:**Pre-implementation Reflection****Challenges**

- Effectiveness of the keyword chosen by the students

Steps taken for address the challenges:

- Before having this activity, course instructor pointed out the important key words while handling the class
- Course instructor motivated the students to listen the key points which might have more chances of getting in two marks question in examination.

Post Implementation reflection:

- Most of the students were actively participated in the activity.
- Students in the class were able to identify and correct the mistakes when they presented the information about the keyword.
- Students understood the various technologies used in network based systems viz. Multicore & Multi-threading technologies, GPU Computing, identify the scope of VM & Virtualization middleware and etc.
