

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University
Accredited by NAAC & An ISO 9001:2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Computer Science and Engineering

Academic Year 2024 – 2025 (Odd Semester)

Degree, Semester & Branch: V Semester B.E. CSE

Course Code & Title: CCS375 Web Technologies

Name of the Faculty member (s): Mrs.B.Vijayalakshmi, AP (SG)/CSE

Innovative Practice Description

- **Unit / Topic: Unit II / Event Handling**

- **Course Outcome: CO2**

- **Topic Learning Outcome: 2a**

- **Activity Chosen: Real World Learning**

- **Justification:**

Theoretical knowledge of event-handling methods is significant, but grasping their application in real-world contexts improves understanding. Websites utilize various event-handling methods to manage user interactions such as clicks, hovers, scrolls, and form submissions. An active learning strategy promotes learners to investigate these strategies in practical contexts, facilitating the connection between abstract concepts and concrete applications.

- **Time Allotted for the Activity: 10 Minutes**

- **Details of the Implementation:**

- The event handling methods used in JavaScript were explained in detail to the students.
- The activity was conducted at the end of the class for the duration of 10 minutes.
- The students were instructed to inspect their interested website using tools like browser developer tools. They are asked to explore how the various events were handled in the particular website and list the different event handlers used.
- The students inspect the page and write the different event handlers used in the page. The students finding were shown in Figure.1.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO5	PO8	PO9	PO10	PO11	PO12	PSO1
CO2	3	3	3	3	3	1	2	2	1	3

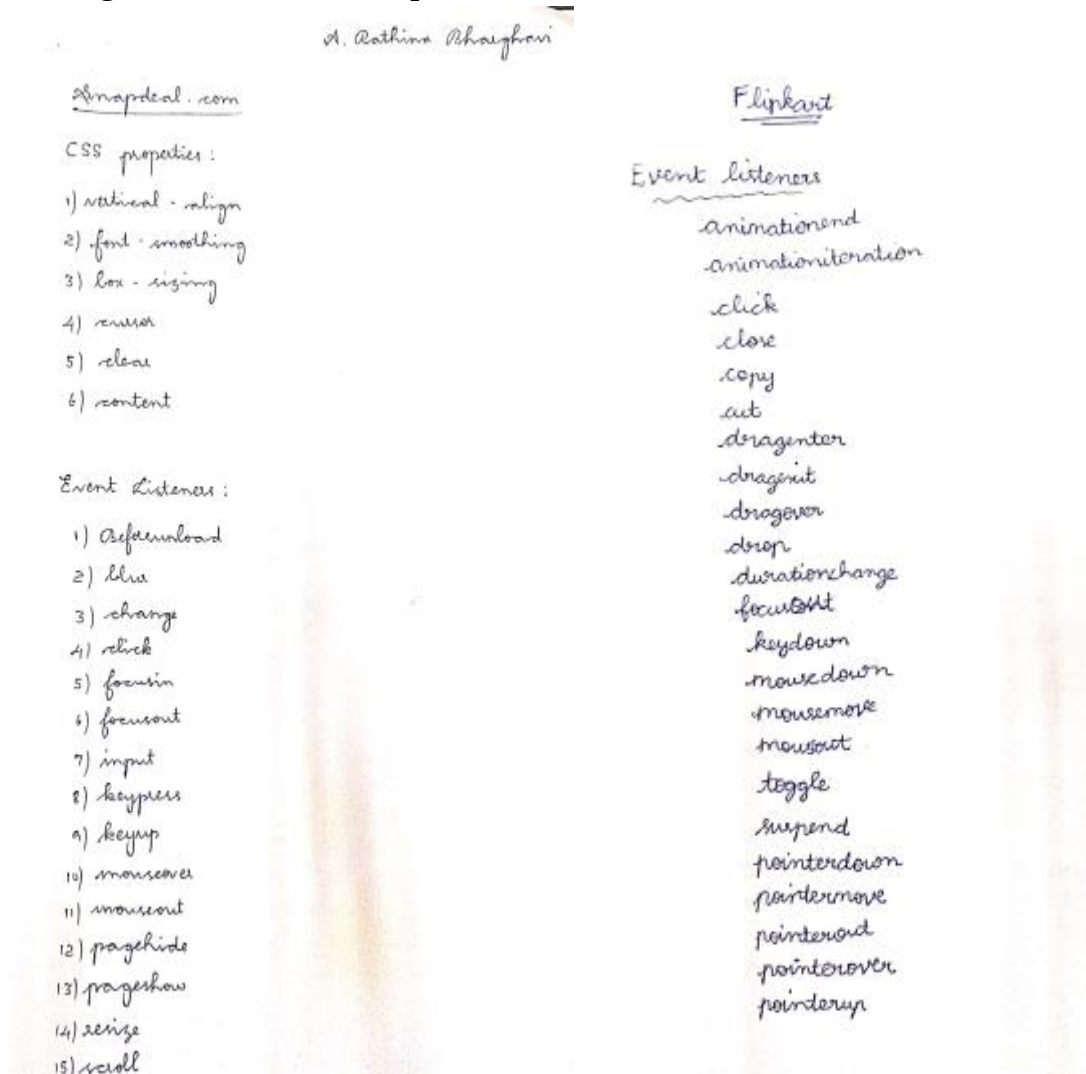

(1 – Low 2 – Moderate 3 – High)

- **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO9	PO10	PSO1
	2	2	1	1	3

Justification for correlation	The students apply the knowledge of event handling for web page design	The students identify the different event handler used to design a page	The students individually present their ideas	The students communicate the different ways of event methods used in a website.	The knowledge of event handling is essential in developing interactive web applications

- **Reflective Critique:**

- ❖ **Feedback of practice from students and other stakeholders:**

- The process of analyzing real-world websites helped the students better understand the practical applications of event-handling methods

- ❖ **Benefit of the practice:** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- By looking at real-world examples and learning from them, students get interested in web development and transforms abstract concepts into relatable and practical experiences.
 - Students get exposed to a different event handling methods used in different websites which deepens their understanding of event handling in their own website design process.

- ❖ **Challenges faced in implementation:**

- Some of the students may struggle to understand complex event-handling implementations on real websites without sufficient guidance.
 - Students felt difficult to identify and analyze event-handling mechanisms, particularly when the codebase is large or complex.
