

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering
Academic Year: 2020 - 2021 (Even Semester)

Degree, Semester & Branch: IV Semester B.E. Computer Science and Engineering

Course Code & Title: CS8451 & Design and Analysis of Algorithms

Name of the Faculty member: Ms.P.Jothi Thilaga, AP/CSE

Date & Venue: 24.02.2021 & CR204

Innovative Practice: Minute Paper

Topic: Asymptotic Notations

Type of Learning:

Active Learning

Learning Objectives:

O1: To make the students to understand the concept of asymptotic notation and its properties.

Description:

Minute paper is a short writing activity within the classroom in which students generate answers in response to questions asked by the teacher regarding the concepts taught in class. These questions stimulate a student to reflect on the lesson taught and learned and provides feedback regarding their understanding which helps the teachers to plan ahead for the next class. Its major advantage is that it provides rapid feedback on whether the instructor's main idea and what the students perceived as the main idea are the same.

Uses of Minute Paper:

- This activity provides a conceptual bridge between successive class periods.
- Improve the quality of class discussion by having students write briefly about a concept or issue before they begin discussing it.

Justification for chosen the topic:

Asymptotic notation is an important topic in Design and Analysis of Algorithms. These notations are used in the analysis part of the algorithms. The algorithm's efficiency is analyzed and representing using these notations. This activity makes the students to get a comprehensive knowledge in this concept.

Implementation of Minute Paper:

At the end of the class, students were asked to write about the topic discussed in the class. The students expressed the understood content and the content which were not clear in that particular topic. The students also write about the specific topic which is needed to be discussed or clarified in the further classes. This activity shows whether the students can able to understand the specific topic and their involvement the particular class.

Big oh: (O)
 $t(n) \in O(g(n))$
 It represents upper bound value.
 It is for worst case efficiency.

Big omega: (Ω)
 $t(n) \geq c \cdot g(n)$
 It is for best case efficiency
 It represents lower bound value

Big theta: (Θ)
 $t(n) \in \Theta(g(n))$ $c_1 \cdot g(n) \leq t(n) \leq c_2 \cdot g(n)$
 It is for average case efficiency
 It represents upper and lower bound value

CS Scanned with CamScanner

Asymptotic notation:
Big oh (O)
 $t(n) \in O(g(n))$
 It is right upper bound value.
 $t(n) \in O(g(n))$

 $\rightarrow t(n)$ bounded above
 $\rightarrow$ worst case efficiency.

Big omega (Ω)
 $t(n) \geq c \cdot g(n)$
 It is right lower bound.
 $t(n) \in \Omega(g(n))$

 $c_1 \cdot g(n)$

CS Scanned with CamScanner

1) Big Oh $O()$ $\Rightarrow t(n) \in O(g(n))$ tight Upperbound value
 $t(n) \leq c \cdot g(n)$
 little oh $o()$ $\Rightarrow t(n) < c \cdot g(n)$ loose Upperbound value

2) Big Omega $\Omega()$ $\Rightarrow t(n) \geq c \cdot g(n)$ tight lowerbound value
 little Omega $\omega()$ $\Rightarrow t(n) > c \cdot g(n)$ loose lowerbound value

3) Big theta $\Theta()$ $\Rightarrow c_1 \cdot g(n) \leq t(n) \leq c_2 \cdot g(n)$
 [Average case]

CS Scanned with CamScanner

Asymptotic notation:

1. Big oh (O) $\rightarrow$ worst case.
 $t(n) \in O(g(n))$
 $t(n)$ said to be $O(g(n))$ when, $t(n)$ is above by constant multiple of $g(n)$.
 $t(n) \leq c \cdot g(n)$

2. Big omega (Ω) $\rightarrow$ Best case
 $t(n) \in \Omega(g(n))$
 $t(n)$ said to be $\Omega(g(n))$ when, $t(n)$ is below by constant multiple of $g(n)$.
 $t(n) \geq c \cdot g(n)$

3. Big theta (Θ) $\rightarrow$ Average case
 $t(n) \in \Theta(g(n))$
 $t(n)$ is bounded above & below by a constant multiple of $g(n)$.

CS Scanned with CamScanner

Outcomes:

- Use of minute papers in the classroom actually increases attentiveness in the class and also improves the students' skill of writing and critical analysis of the topics.
- This activity reflects the understanding and involvement of the students in the particular topic.

Relevance to POs

Objective	PO1	PO2	PO3	PO4	PO5	PO9	PO12
O1	3	3	2	2	2	3	2

Reflective Report:**Identified Problems**

- Some students are hesitated and lack to share the concepts that they learnt in the class.

Initiatives to address the problems

- Make the students to know the impact and importance of sharing their views and understanding related to the topic and made them involve in the activity.
- Addressed the students that the activity is not a kind of evaluation methodology to assess.

Post-implementation

- Students were actively participated in this activity.
- From this activity, the muddiest parts in the concept were identified and the properties of asymptotic notations were explained in the next class for well understanding.
- The graphical representations of the asymptotic notation were again explained for their better understanding.
