

Department of Computer Science and Engineering

Academic Year 2021 – 2022 (Odd Semester)

Degree, Semester & Branch: III Semester B.E. ECE 'A'

Course Code & Title: EC8393 & Fundamentals of Data Structures in C

Name of the Faculty member (s): Ms.P.Jothi Thilaga, AP/CSE

Innovative Practice Description

- **Unit / Topic:** Unit II / Pointers, Pointers arithmetic

- **Course Outcome:** CO2

- **Topic Learning Outcome:** TLO5

- **Activity Chosen:** Think-Pair-Share

- **Justification:**

Pointers concept is one of the important topics, repeatedly asked in university questions and it is an important concept needed for doing many software applications. This activity makes the students to get a sound knowledge in pointer concept. Students think individually about a pointer concept and share their ideas with their classmates that improve creative thinking and oral communication skills.

- **Time Allotted for the Activity:** 20 Minutes

- **Details of the Implementation:**

Think-Pair-Share is a collaborative, active learning strategy. Initially the students were asked to think about the topic "Pointers and Pointers Arithmetic" and make a note on it individually for five minutes. Next the students are grouped with other students in the class to share their ideas about the given topic and also listen to others view on that topic for the next five minutes. Finally, the following students from various groups – Kapil S, Madhan R, Lakshana S, Akila M, Kamalesh J and Manoj Prabhakaran K shared about the concepts of pointers and pointers arithmetic to the entire class is shown in the Figure 1.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO10	PSO1
CO2	3	1	1	1	2	1

(1 – Low

2 – Moderate

3 – High)

- PO / PSO mapped:

Innovative practice	PO1	PO2	PO3	PO4	PO10	PSO1
	3	1	1	1	2	1
Justification for correlation	Pointer concept is a fundamental knowledge necessary to develop C programs.	Concepts of pointers are used in analysis of engineering problems	To design solutions for complex problems using pointer concepts	To provide complex problem solutions with specific pointer concept	Able to execute and present programs using pointer Concept	Able to apply pointer concepts in emerging trends in Information Technology

- Images / Screenshot of the practice:

Figure 1: Screenshots of Think-pair-share activity

- **Reflective Critique:**

- ❖ ***Feedback of practice from students and other stakeholders:***

- All the students were actively participated and enjoyed among their group members once they answered correctly.
- Students explored the knowledge of the various sorting techniques.
- It makes the students to gain well knowledge on different sorting and searching techniques concepts, complexity and applications.

- ❖ ***Benefit of the practice:***

- Students were actively participated in this activity.
- From this activity, each student can refresh the pointer concept and recall and understood the topic clearly while the information is shared among them.
- Examples were given and explained for their better understanding.

- ❖ ***Challenges faced in implementation:***

- Due to time constraints, only few pair of students were made to share the concepts by a random call
- Slow learners were felt difficult to share the concepts in-front of others.
