

Department of Computer Science and Engineering
Academic Year 2023 – 2024 (Odd Semester)

Degree, Semester & Branch: I Semester B.E. CSE 'A'

Course Code & Title: GE3151 Problem Solving and Python Programming

Name of the Faculty member (s): Mrs M. Swarna Sudha , AP (SG)/CSE

Innovative Practice Description

- **Unit / Topic: Unit V / Exception Handling**

- **Course Outcome: CO5**

- **Topic Learning Outcome: TLO14**

- **Activity Chosen: Roleplay**

- **Justification:**

Exception handling is a concept applied in real-world programming scenarios. Role-play activities allow students to simulate these scenarios, providing a practical and tangible application of the theoretical knowledge. The clear understanding of the concept such as exception and how to handle the different types of exception is required to handle various exception situations in the program. It is essential for the students to make the program execute correctly without any interruption. So to make a better understanding of the exception handling, role play was chosen.

- **Time Allotted for the Activity: 10 Minutes**

- **Details of the Implementation:**

Demonstrate exception handling through role-play with students acting as different blocks (try, except, finally, and else).

ATHISH M: Represents the try block.

ARJUN S: Represents the except block.

DEEPAK LINGARAJ M: Represents the finally block.

SANJAY P: Represents the else block.

- Role-play is used to show a live demonstration of how a particular task will be handled. It gives a clear understanding to the students while they are involving in that activity.
- The activity was conducted in a classroom for a duration of 10 minutes. The students are playing a role of different block such as try, except, finally and else.
- The input to the program is given and based on the input which exception block will be executed is determined and the students having the particular block act accordingly to the input.
- Figure 1 shows the students involvement in the activity.

• **CO – PO / PSO mapping:**

CO	PO1	PO2	PO9	PO10	PSO1	PSO3
CO5	3	2	1	1	3	3

(1 – Low 2 – Moderate 3 – High)

• **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO9	PO10	PSO1	PSO3
	3	2	1	1	3	1
Justification non	The basic knowledge about exception is needed	The students analyze the exception on situation and identify the ways to handle	The students coordinate and demonstrate	The students communicate the working of Exception handling	The concept is used in developing software	The concept is used in solving problem in AI

• **Images / Screenshot of the practice:**

Fig 1 shows the Demonstrate exception handling through role-play with Athish M Arjun S Deepak Lingaraj M Sanjay

Reflective Critique:

❖ **Feedback of practice from students and other stakeholders**

- They feel it is very interesting and told they understand how the exception handling works clearly.
- Some of the students actively involved and enjoyed the activity.

❖ ***Benefit of the practice:*** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- It helps the students to familiarize how the multiple except blocks will work and which exception can be handled.
- This activity makes the class more interactive.
- Students can able to explain the concepts without any confusion.
- This activity brought out an interest in them and provided a happy & joyful learning environment.
- This practice has made the class more interactive than the conventional practice

❖ ***Challenges faced in implementation:***

- Some of the students are not interested to come front and involved in the activity.
- Not able to make all the students to involve in this activity
