

RAMCO INSTITUTE OF TECHNOLOGY
(An Autonomous Institution)

Approved by AICTE, New Delhi & Affiliated to Anna University
NAAC Accredited with 'A+' Grade & An ISO 9001: 2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE, MECH and CIVIL

Department of Computer Science and Engineering

Academic Year: 2025 - 2026 (Even Semester)

Degree, Semester & Branch: VI Semester B.E. CSE

Course Code & Title: CCW332 & Digital Marketing

Faculty member (s): Mrs. P. Devisri, AP/CSE

Innovative Practice Description

Unit Topic: Unit III / Mobile Marketing – Mobile Inventory / Channels - Location Based

Course Outcome: CO 3

Topic Learning Outcome: 3c

Activity Chosen: Live Location-Based Campaign Simulation

Justification:

Mobile marketing through location-based channels, mobile inventory, and multi-channel strategies is a critical competency for modern digital marketers. Designing geo-targeted campaigns requires students to think practically about real-world audience behavior in specific geographic zones. The Live Location-Based Campaign Simulation enabled students to apply mobile marketing concepts by creating a realistic campaign for a fictional brand. This activity helped students understand the strategic importance of location, timing, and channel selection, while fostering teamwork, creativity, and decision-making skills.

Time Allotted for the Activity: 40 minutes

Details of the Implementation:

- The faculty introduced the concept of Location-Based Mobile Marketing, covering mobile inventory types, available channels (SMS, push notifications, in-app ads), and the significance of geo-targeting in reaching the right audience at the right place and time.
- Students were divided into two groups (3–4 members each) and assigned a fictional local brand to design a complete geo-targeted mobile marketing campaign.

Group 1 – Team GeoReach (Figure 1)

- Students: Kaviyalakshmi J K, Kamali sri K S, Sivapriya A, Hemamalini R
- Brand chosen: QuickBite Café – a fictional quick-service café targeting college students.
- The team identified geo-zones including the college campus, nearby bus stop, and a food court in the local mall.

The team's shared details included:

1. A Google Maps screenshot marking their three geo-zones with annotations.
2. A drafted SMS alert: "Hey! QuickBite Café – 20% OFF today only near [Your Location]. Flash your phone & grab your snack! Valid 12–3 PM."
3. A push notification draft: "You're near QuickBite! Tap for a surprise deal ☐"
4. Timing strategy: Morning alerts at 8 AM for breakfast promotion and afternoon push at 12 PM for lunch deals.

Group 2 – Team ZonePulse (Figure 2)

- Students: Vignesh A P, Vignesha S, Senthathi Kalai Pandiyan P, Ramakrishnan A
- Brand chosen: TrendWear – a fictional clothing store targeting youth aged 18–30 in urban areas.
- The team mapped geo-zones around a shopping mall, a metro station, and a college fest venue.

The team's shared details included:

5. A geo-zone map on Google Maps with highlighted coverage radius for each zone.
 6. An SMS campaign draft: "TrendWear SALE near you! Up to 40% OFF – This weekend only. Visit us at [Mall Name]. Show this SMS for extra 5% OFF."
 7. A push notification draft: "You're steps away from TrendWear! New arrivals just dropped ☐☐"
 8. Channel selection rationale: Instagram in-app ads for youth, SMS for older segment, Google Maps pin for walk-in traffic.
- Both groups plotted their geo-zones on Google Maps using mobile devices and presented their campaign logic with justification for zone selection, channel choice, and message design.
 - A peer voting session was conducted where the class evaluated each campaign based on creativity, practicality, and relevance to mobile marketing principles.
 - The faculty provided constructive feedback, highlighting precision targeting, message clarity, and the importance of timing in mobile campaigns.

CO – PO / PSO mapping:

CO	PO1	PO4	PO10	PSO1	PSO2
CO 3	3	2	2	3	2

(1 – Low 2 – Moderate 3 – High)

PO / PSO mapped:

Innovative Practice	PO1	PO4	PO10	PSO1	PSO2
Live Location-Based Campaign Simulation	3	2	2	3	2
Justification for correlation	Students applied mobile marketing strategies through geo-zone analysis and location-based campaign design, demonstrating engineering knowledge.	Students formulated campaign problems and designed solutions by identifying optimal channels, zones, and timing strategies.	Students improved communication skills by presenting geo-targeted campaigns clearly to peers and faculty.	Students gained practical exposure to real-world mobile marketing planning and location-based digital tools.	Students demonstrated awareness of digital marketing ecosystem including mobile channels, user behavior, and campaign metrics.

Figure 1: Team GeoReach – Geo-Zone Map & SMS Draft

Figure 2: Team ZonePulse – Google Maps Campaign Planning & Push Notification Draft

Reflective Critique:

Feedback of practice from students and other stakeholders:

- Students found the activity highly engaging and directly relatable to real-world mobile marketing scenarios.
- Mapping geo-zones on Google Maps made the concept of location-based targeting tangible and easy to visualize.
- Students appreciated the freedom to choose their own brand and creatively design their own campaign message.
- Peer presentations and the voting session added a healthy competitive spirit that boosted participation and confidence.

Benefit of the practice:

- Improved understanding of mobile marketing channels, geo-targeting, and campaign design.
- Enhanced critical thinking in audience segmentation and mobile channel selection.
- Encouraged teamwork, peer learning, and creative problem-solving under time constraints.

- Bridged the gap between theoretical mobile marketing concepts and practical campaign execution.

Challenges faced in implementation:

- Some students needed guidance to distinguish between different mobile channels and their appropriate use cases.
- Managing time for both campaign planning and presentation within a single session was challenging for a few groups.
