

Department of Computer Science and Engineering
Academic Year 2021 – 2022(Odd+Even Semester)

Degree, Semester & Branch: B.E, VI & CSE

Course Code & Title: CS8603 & Distributed Systems

Name of the Faculty member (s): Dr.M.Gomathy Nayagam

Innovative Practice Description

- **Unit / Topic: Unit V / Content Addressable Network**
- **Course Outcome: CO 5**
- **Topic Learning Outcome: TLO10**
- **Activity Chosen: Concept Summarization**
- **Justification:**
After teaching the concept of Content Addressable Network, this task is given to evaluate students' understanding level.
- **Time Allotted for the Activity: 10 Minutes**
- **Details of the Implementation:**

The course Instructor explained the concept of Content Addressable Network. During the explanation, he instructed the students to learn the concept, CAN Maintenance and optimization of content Addressable Network with their own examples. He allotted 5 minutes time to recollect the concept and discuss among them with in a bench. He randomly chosen the student and gave 10 minutes time to explain the concept he/she learnt from the class. The following fig 1 shows the student of Ms.Jeyarani explained the concept to their peer group members.

Fig.1. Ms.Jeyarani explained the Concept about the Content Addressable Networks.

• CO – PO / PSO mapping:

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
CO 5	3	1	1	1	2	-	-	-	-	2	-	2	3	3	2
(1 – Low						2 – Moderate					3 – High)				

• PO / PSO mapped:

Innovative practice	PO 1	PO 2	PO 3	PO 4	PO 5
	3	1	1	1	2
Justification for correlation	Students could be able to apply basic engineering theory and principles of Content Addressable Network	Students could be identify their own example to explain the CAN	Students could be able to recollect the basic concepts of CAN	Students could able to interpret and explain the CAN	Student can able to identify the modern technology used in peer to peer to network

Innovative practice	PO 10	PO 12	PSO1	PSO 2	PSO 3
	2	2	3	3	2
Justification for correlation	Students could be able to communicate with their peer members and also they shared their	Students could be able to learn the basic engineering concept to understand the working of CAN	Students could be able to use the peer to peer technologies in the mobile computing technologies	Students could be able to apply CAN in AI	Students could be able to use CAN concept in IOT networks.

	views about the concept in front of the class to avoid their stage fear.				
--	--	--	--	--	--

• **Reflective Critique:**

❖ **Feedback of practice from students and other stakeholders:**

Students felt that this activity is used to get final summarization of particular class

❖ **Benefit of the practice:** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- Students interaction with their peer members and the class during the activity was good and effective.

❖ **Challenges faced in implementation:**

- Only few students are interested to come forward and summarize the concept in front of the class.
