

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University
Accredited by NAAC & An ISO 9001:2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Computer Science and Engineering

Academic Year 2023 – 2024 (Odd Semester)

Degree, Semester & Branch: III Semester B.E. CSE 'A'

Course Code & Title: CS3391 Object Oriented Programming

Name of the Faculty member (s): Mrs.B.Vijayalakshmi, AP (SG)/CSE

Innovative Practice Description

- Unit / Topic: Unit III / Multithreading**

- Course Outcome: CO3**

- Topic Learning Outcome: TLO7**

- Activity Chosen: Muddiest Point**

- Justification:**

The muddiest point activity is used to find out the understanding level of the students. The concept of multithreading is very much essential in the development of any application, the students level of concept depth has to be assessed. For the purpose this activity is chosen for this topic.

- Time Allotted for the Activity: 10 Minutes**

- Details of the Implementation:**

- Muddiest point is a classroom assessment technique that gives students opportunities to point out what they are most confused about and clearly explain what is muddy.
- The multithreading concept was explained with the help of real time examples to the students.
- The activity was conducted at the last 10 minutes of the class after discussing the thread creation, inter thread communication concepts.
- At the end of the class the students are asked to write the most interesting concepts learnt today and also the muddiest point.
- Based on their understanding the students wrote the points and it was collected.
- The faculty member analyzed the points written by the students addressed the most confusing points in the next class.
- The students wrote the reflection about the class is shown in Fig.1.

- CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO8	PO9	PO10	PO12	PSO1	PSO2	PSO3
CO3	3	3	2	1	2	2	1	3	1	1

(1 – Low 2 – Moderate 3 – High)

- PO / PSO mapped:**

	PO1	PO2	PO9	PSO1	PSO2	PSO3
--	-----	-----	-----	------	------	------

Innovative practice	3	2	1	3	1	1
Justification for correlation	The students apply the knowledge of threading	The students analyze where to use the multithreading concepts.	The students individually write their points.	The multithreading concepts are needed in developing the software	The concept is used in security applications	The concept is used in solving problems in AI

• **Images / Screenshot of the practice:**

Fig. 1: Samples written by the students

• **Reflective Critique:**

❖ **Feedback of practice from students and other stakeholders:**

- All the students are interested in writing the interesting and muddiest point they learnt in the class.

❖ **Benefit of the practice:** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- This activity helps to identify the level of understanding of the students on the particular topic.
- The concept that they felt difficult is addressed more clearly in the next session

❖ ***Challenges faced in implementation:***

- Some students represent only very few things in the paper.
