

RAMCO INSTITUTE OF TECHNOLOGY

Department of Computer Science and Engineering

Academic Year: 2019 - 2020 (Even Semester)

Degree, Semester & Branch : VIII Semester B.E CSE

Course(Subject) Code & Title: CS6008 – Human Computer Interaction

Name of the Faculty member :Mrs.M.Swarna Sudha , AP(SG) / CSE

Innovative Practice: JIGSAW

Topics: Evaluation Techniques

Date:3.2.2020

Objectives:

- **O1:** To encourage the students to think, identify and design Evaluation methods.
- **O2:** To improve the listening, communication, imagination skills of the students.

Justification for choosing this topic:

This topic addresses all the components of design principles in human computer interaction. It develops a conceptual design for the HCI. Different Evaluation techniques are assigned to students under each group. Students are provided the opportunity to excel themselves in a particular technique and share that knowledge with their team members. Students can master in all the evaluation techniques. This promotes self and peer teaching which requires students to understand the concept very clearly and engage in discussion and learning.

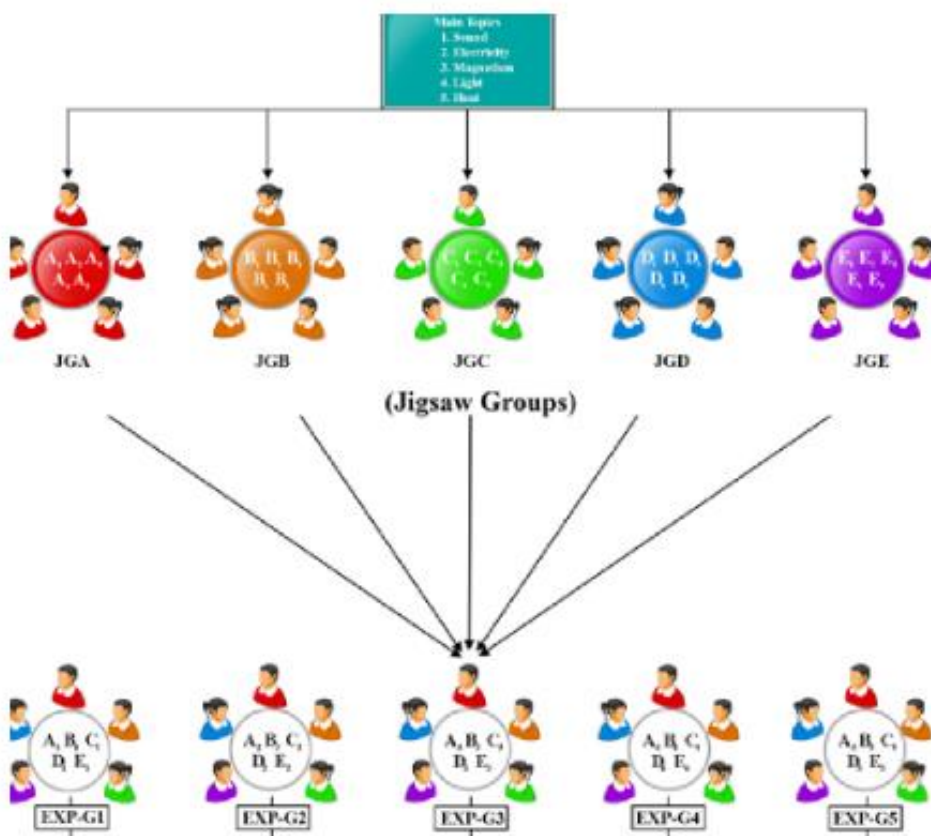

Group activity on modeling the ER concepts

To understand the Evaluation techniques, the students are made to work into groups to discuss and understand different techniques. The students are asked to identify different techniques in evaluation . Thus they have listed out the different methods of evaluation.

1. Cognitive Walkthrough
2. The use of models
3. User participation
4. Formative evaluation
5. Process/implementation evaluation
6. Outcome/effectiveness evaluation

Procedure and Implementation

- Six groups were formed based on the students' academic performance and ability It is called home group.
- One student from each group selected as the leader. Each student in a group was given a number from 1 to 6. Each number is representing the following six different methods
- Expert group members were given 15 minutes to discuss allotted methods of evaluation.
- The expert group students brought back into their home groups and allotted 15 minutes for further discussion in which each member become expert in the entire evaluation technique
- One student from each home group presented his learned content.
- The others in the group were encouraged to raise queries for clarification

OUTCOME:

Through this activity the students are made to work in a team and share their ideas to others and also improve their communication skills. Thus the students were made to understand that the team work will give better ideas. The students are exposed how to identify and design a specific technique, which will help them to do the same when they work in an organization.

Glimpse of Students working as a team

Relevance Mapping - This activity helps in attaining the following Objectives – PO mapping:

Course Outcome / Programme	PO1	PO2	PO3	PO4	PO9	PO10	PO12
O1 - To encourage the students to think, identify and design Evaluation methods .	3	3	3	3	3	3	3
O2To improve the listening, communication, imagination skills of the students.	-	-	-	-	3	3	2

Reflection Critique

Challenges:

- The grouping of the students was difficult.
- Some students in the team did not participate actively in the team.
- Individual assessment/observation was difficult.

Steps taken for address the challenges:

- Initially, I started to group as per planned with 7 teams, but later grouped the members with girls and boys it was time-consuming.
- I motivated the students who did not involve in activity and encouraged that the team as well as individual members to participate.
- Most of the students enjoyed the discussion in the expert group.
- Students' response ensures that the students could improve listening, communication, creativity and problem-solving skills.
