

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University
Accredited by NAAC & An ISO 9001:2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Computer Science and Engineering Academic Year 2025 – 2026 (Even Semester)

Degree, Semester & Branch: B.E.VI Computer Science and Engineering

Course Code & Title: CCS361 – Robotic Process Automation

Name of the Faculty member (s): Dr.M. Swarna Sudha

Innovative Practice Description

Unit V – Topic: Orchestration Server – Control Bots

Course Outcome: CO5

Activity Chosen: Reflection

Justification:

Reflection is an effective learning activity that helps participants evaluate their understanding of the concepts learned. After studying Orchestration Server and Control Bots, participants were encouraged to reflect on bot scheduling, monitoring, deployment, and maintenance processes. Through written responses and feedback, misconceptions and knowledge gaps were identified and clarified. This activity promotes self-assessment, critical thinking, and deeper understanding of the practical applications of orchestration in Robotic Process Automation. It also enables the faculty member to assess the effectiveness of content delivery and provide additional support where needed.

Time Allotted for the Activity: 30 Minutes

Details of the Implementation:

After completed the topic **Orchestration Server – Control Bots**, in order to assess the understanding of the participants and identify their learning difficulties, a reflection activity was conducted. A few questions related to bot scheduling, monitoring, workload management, deployment, and control through the Orchestration Server were given to the participants. The participants were asked to write their understanding of the concepts and mention any doubts or difficulties faced while learning the topic. They were encouraged to express their views on how the Orchestration Server helps in managing and controlling bots in an RPA environment.

The responses were collected and reviewed to identify concepts that required further clarification. Additional explanations and examples related to bot scheduling, monitoring, and deployment were provided in the subsequent class session. The doubts raised by the participants were discussed and clarified to ensure a better understanding of the topic.

A few scenario-based questions were also discussed to reinforce the practical applications of Orchestration Server and Control Bots. The participants felt that the activity helped them recollect the concepts and improve their understanding of deployment and maintenance activities in Robotic Process Automation

CO – PO / PSO mapping:

CO	PO10	PO12	PSO2
CO5	2	2	2

(1 – Low 2 – Moderate 3 – High)

Innovative practice	PO4	PO5	PSO2
	2	2	2
Justification for correlation	Reflection activity improves written communication by encouraging participants to express their understanding, doubts, and observations regarding Orchestration Server and Bot Control.	Reflection promotes self-learning and continuous improvement by enabling participants to identify knowledge gaps and seek clarification.	Understanding bot scheduling, monitoring, and control mechanisms helps in developing and managing automation solutions effectively.

Screenshot of the practice:

Figure-1 Students doing the Reflection activity

Reflective Critique:

- The reflection activity provided an opportunity to evaluate understanding of Orchestration Server and Control Bots.
- Participants felt that writing their responses helped them recollect the concepts related to bot scheduling, monitoring, deployment, and maintenance.
- The activity enabled participants to identify areas where they required additional clarification and strengthened their understanding through subsequent discussions
- The feedback received helped in improving the teaching-learning process by identifying commonly misunderstood concepts.

Benefit of the Practice:

- Better understanding of the functions and significance of Orchestration Server in managing automation processes
- Improved ability to explain bot scheduling, monitoring, and control mechanisms.
- Enhanced self-assessment and critical thinking skills through reflection on the learned concepts.
- Reinforced understanding of deployment and maintenance activities in Robotic Process Automation.
- Encouraged active participation and continuous learning.

Challenges faced in implementation:

- • Some participants found it difficult to express their understanding and doubts in written form.
- • A few participants were hesitant to provide detailed feedback about the concepts they found difficult.
- • Limited time was available to discuss all the doubts raised during the reflection activity.
- • Variations in learning pace resulted in different levels of responses and understanding.
- • Some participants required additional examples and real-time scenarios to fully understand bot control and orchestration concepts.
