

Department of Computer Science and Engineering
Academic Year 2023– 2024 (Odd Semester)

Degree, Semester & Branch: B.E, V, CSE

Course Code & Title: CCS334 & Big Data Analytics

Name of the Faculty member (s): Dr.I.Gethzi Ahila Poornima

Innovative Practice Description

- **Unit / Topic:** Unit IV / Hadoop Distributed File system
- **Course Outcome:** CO4
- **Activity Chosen:** One Minute Paper
- **Justification:**

The main purpose of this course is to help the students to work with various big data tools for storage and processing of big data for analytical purpose. In order to satisfy this, the student should be made familiar with the HDFS (Hadoop Distributed File System).

- **Time Allotted for the Activity:** 15 Minutes
- **About the Event:**

A certain subject is chosen whose comprehension is critical for tests and for developing a more profound understanding of things to come. This will be the topic of discussion for the first twenty-five minutes of class. At the conclusion of class, the students will be required to write a few points summarising the material that was presented in order to gauge their level of understanding. Through the students' written assignments, the course instructor may ascertain the students' comprehension level.

- **Details of the Implementation:**

As per the justification given above, the topic was chosen for this event. As per the course plan, on the day of topic “HDFS” in course plan, the event was executed. In the first 25 minutes, they had been taught about Hadoop Distributed File System”. After 25 minutes, the students were asked to write a short note on Hadoop Distributed file system. It was told that the writing is not expected to be as in text book. They were asked to write their own. Also, the event had not been informed in prior. The students' knowledge level was determined after reviewing their one-minute paper. Approximately 2-3 % of students had trouble writing correct concept. The remaining students all wrote their answers accurately. A sample page written by Ms.M. Kaartheeswari is given in Figure 1.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PSO3	PSO1
CO2	3	3	2	1

(1 – Low 2 – Moderate 3 – High)

• **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PSO1
	3	3	2	1
Justification for correlation	The students will be able to save big data in HDFS to solve may important problem types.	The Students could be able use HDFS concept that applies to a given problem.	The students will be able to determine the storage technique and Analyze the big data to solve complex problem.	The students will be able to analyze huge amount of data to solve complex computational task.

• **Images / Screenshot of the practice:**

Figure 1- Sample Page written by Ms.P. Kartheeswari (953621104020)

• **Reflective Critique:**

❖ ***Feedback of practice from students and other stakeholders:***

The students gave good feedback about this activity. They felt that, they could be more thorough with this concept by doing this activity.

❖ ***Benefit of the practice:***

- Most of the students take this activity as positive and started writing on their own words with the good understanding of the concept of HDFS.
- As a faculty, I could determine the students' comprehension of HDFS

❖ ***Challenges faced in implementation:***

- Very few students hesitated to write their understanding in paper.
