

Department of Computer Science and Engineering

Academic Year 2021 – 2022 (Odd Semester)

Degree, Semester & Branch: III semester B.E. CSE

Course Code & Title: CS8392 Object Oriented Programming

Name of the Faculty member (s): Mrs.N.Nithya

Innovative Practice Description

- **Unit / Topic:** Unit II / Strings
- **Course Outcome:** CO 2
- **Topic Learning Outcome:** TLO5
- **Activity Chosen:** Random Method (Name) Picker
- **Justification:**

The String class contains a plethora of methods for students to remember, comprehend, and apply to many applications. A fun-filled, visually appealing exercise will undoubtedly hold their attention. Random method (name) picker activity is one of the best activities from classtools.net for engaging students in recalling String methods.

- **Time Allotted for the Activity:** 25 minutes

- **Details of the Implementation:**

The Random Name Picker resembles a spinning wheel. The random name picker was used by the course instructor to store the various String methods in Java. The instructor informs a student to step forward and click to spin the wheel as in Fig. 1. When a student spins the wheel and a random method name will be selected. The student then explains the method's functionality, arguments (if any), and return type and value to the other students using example code as in Fig. 2 and Fig. 3. To avoid repetition, once the student has explained the functionality, the method is removed from the spin wheel.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO8	PO9	PO10	PO12	PSO1	PSO2	PSO3
CO2	3	3	2	1	2	2	1	3	1	1

(1 – Low 2 – Moderate 3 – High)

- **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO9	PSO1	PSO2	PSO3
	3	3	2	2	3	1	1
Justification for	Pre-requisite	The practice	The practice is	As the students	The concept in the	The concept in	The concept in

correlation	knowledge about Strings and its application is necessary and so its correlated to level 3	is mapped to level 3 as it is used to solve problems like pattern matching, extraction etc.	mapped to level 2 as it provides design solutions for complex engineering problems	presents and explains individually, the practice is mapped to level 2	practice is highly used in software development	the practice is used in cloud computing applications	the practice is used in AI applications

Fig. 2: Student explaining functionality, argument etc.

Fig. 3: Student explaining functionality, argument etc.

- **Reflective Critique:**

- ❖ ***Feedback of practice from students and other stakeholders:***

- On seeing the spinning wheel type of activity students were too excited to participate.
 - Students offered their fullest co-operation & actively participate in learning.
 - When a student was unable to recognize a method, a volunteer from audience explained the purpose of the method.
 - This activity brought out a curious child in them and provided a happy & cheerful learning environment.
 - Many students responded that they wanted to learn more when the session ended and this would be a good start for continuous learning.

- ❖ ***Benefit of the practice:***

- This practice has made the class comparatively more interactive than the conventional practice

- ❖ ***Challenges faced in implementation:***

Nil
