

RAMCO INSTITUTE OF TECHNOLOGY
Department of Computer Science and Engineering

Academic Year: 2019 - 2020 (Even Semester)

Degree, Semester & Branch: VI Semester B.E. CSE

Course Code & Title: CS8691 Artificial Intelligence

Type of Activity: Reflection, Group Activity

Topic: Constraint Satisfaction Problems, Constraint Propagation, Game theory

Date: 22-01-20, 05-02-20

Objectives:

O1: To make the students to learn and explore the concept of Constraint Satisfaction Problems, Constraint Propagation and Game theory.

Justification for choosing the particular topic:

- The topic “Constraint Satisfaction Problems, Constraint Propagation” is more important concept and the problems may ask in this topic.
- To know the level of student understanding in the particular topic the activity reflection was conducted to address the doubts.

Reflection Activity Description:

- Reflection activity is conducted as the part of teaching. In order to address the doubts and to know the level of understanding of the students, they were insisted to honestly describe the concepts that they didn't understand well.
- The students wrote their doubts and topics which they are not clear. The papers are collected by the teacher and discussed the doubts in next class. The teacher also provided a written explanation on the papers collected from the students for future reference.

Group Activity:

- In the group activity the students were divided into groups as given in table 1.1.
- Each group particular topic and problem was given from Constraint Satisfaction and game theory as attached in annexure-I.
- The topic and group were announced 10 days before to the students through a canvas and classroom.
- Each group explained the concepts and problems on 05-02-2020. The activity was conducted in the CSE seminar hall.
- The activity was conducted 40 minutes.

Sample

S. Vasuki

In map colouring problem, the domain should always be constant or vary? Explain why?

Domain may vary. Depends on the complexity.

No more than 4 colors are required to color the regions of map.

Number Finding Method.

Teach short cut method to solve quickly.

OK. good. For finding numbers, first by take variables of same then substitute Yogesh and the value, it Ramji will help to solve quickly.

Glimpse of Group Activity

Reflection critique

Observation Made:

- Some of the students finding difficulties to solve crypt arithmetic problems.
- In group activity, some students from group came and ask doubts during break and lunch.

Post Implementation:

- Activity helps the teacher to analyze, evaluate and improve their own learning.
- The activity involved the students to revise the concepts.

Steps taken:

- Explanation is written in the students' paper and common doubts among students are discussed and explained.

Relevance of Program Outcomes

Course Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
O1	3	2	1		1			2		2		3

Attendance details for Even Semester (2019-2020) VI Semester B.E. Computer Science and Engineering Group Activity Questions Annexure -I

Name of the Faculty member: Mrs.S.Manjula

Course Code & Title: CS8691 Artificial Intelligence

1. Constraint Satisfaction Problems
2. Constraint Propagation
3. Backtracking Search
4. Minimax Algorithm
5. Alpha - Beta Pruning
6. Stochastic Games
7. Consider a two-player game in which the minimax search procedure is used to compute the best moves for the first player. Assume a static evaluation function that returns values ranging from -10 to 10, with 10 indicating a win for the first player and -10 a win for the second player. Assume the following game tree in which the static scores are from the first player's point of view. Suppose the first player is the maximizing player and needs to make the next move. What move should be chosen at this point? Can the search be optimized?

8. Compute alpha beta pruning for the give tree.

Table 1.1 Group Information

Sl. No.	Reg. No.	Name of the Student	Topic
Group 1			
1.	953617104001	AISHWARYA A	1
2.	953617104002	AISHWARYA K
