

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University
Accredited by NAAC & An ISO 9001:2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Computer Science and Engineering

Academic Year 2021 – 2022 (Even Semester)

Degree, Semester & Branch: VI Semester B.E. CSE

Course Code & Title: CS8691 Artificial Intelligence

Name of the Faculty member (s): Mrs.S.Manjula

Innovative Practice Description

Unit / Topic: Unit II / Local Search Algorithms and Optimization Problems

Course Outcome: CO 2

Topic Learning Outcome: TLO 4

Activity Chosen: Think Pair Share

Justification:

- The topic “Local Search Algorithm” has more sub topics and under each sub topic the students need to learn more concepts. This activity makes the students to get a sound knowledge in this concept. Students think individually about a topic and share their ideas with their classmates that develop creative thinking and oral communication skills. As a result, this activity will assist students to recall for their exams.
- Time Allotted for the Activity:** 10 minutes

Details of the Implementation:

- Instructor explained the particular concepts/topic in classroom within 35 minutes.
- Based on the discussion the teacher asked the students to think about the given topic 5 minutes individually without discussing with other in the class (Think).
- Next, pair up or make a group with others in the class and discuss their points with them 5 minutes and also listen their views (Pair).
- Finally share points with the entire class (Share).
- This assisted the students in recalling the topic taught on that specific day, generating new ideas about the topic, and answering questions about the topic with ease.

CO – PO / PSO mapping:

CO	PO1	PO2	PO3	PSO1
CO 2	2	1	1	1

(1 – Low 2 – Moderate 3 – High)

PO / PSO mapped:

Innovative practice	PO1	PO2	PO3	PSO1
	2	1	1	1
Justification for correlation	Apply knowledge of mathematics to solve search problems	Problem Solving Approach used to design solutions to complex engineering problems	Provide solution to the real time problems by using search algorithms and optimization problems	Students can be able to solve complex computation task using various optimal decisions representation.

• **Images / Screenshot of the practice:**

Figure:1 Glimpses of Think-Pair-Share Activity

• **Reflective Critique:**

❖ **Feedback of practice from students and other stakeholders:**

❖ Students grasped the topic, as evidenced by their responses to the quiz II in the local search algorithm. 88% respondents correctly in the particular topic.

❖ **Benefit of the practice:** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- From this activity, the students can get more clarity in the particular topic by discussing and sharing their views with the other students in the class.
- Coordination level among the students increased.
- Students enjoyed this learning activity and builds confidence with students.

Challenges faced in implementation:

The activity needs more time to share their thoughts. I planned the activity for 15 minutes only. But in real scenario it takes above 15 minutes to complete this activity.
