Ramco Institute of Technology

Approved by AICTE, New Delhi & Affiliated to Anna University
Accredited by NAAC & An ISO 9001:2015 Certified Institution NSA
Accredited UG Programs: CSE, EEE, ECE and MECH

About The Department

The Computer Science and Engineering department started in the year of April 2013 with a vision to become a Centre of Excellence by making the students to compete and adapt to the changing pace of the industries.

The Department strives with an outlined vision in producing socially responsible and employable engineers. It has a team of well qualified and highly experienced faculty members and technical staff who deliver their skills to the students through 360 teaching-learning environment which includes deployment of Moodle, Video Tutorials from NPTEL, Spoken Tutorial which are all streamlined with NMEICT. Some of the bright students are pursuing MITx courses for enhanced learning. The faculty members impart knowledge through curriculum based formal education and industry focused informal education which enhances the aptitude and reasoning skills of the students to make them readily employable.

The Department has modern, well equipped and updated infrastructure facilities to achieve the target of making students readily employable.

The Computer Centers provide Central Computing facility across 1000+ nodes which are backboneed by IBM 8 Blade Servers and Juniper Networks. Nodes have communication outlet with a speed of 1200 Mbps dedicated leased line facility which can be accessed in both wired and Wi-Fi environment. The department procured all latest software including Oracle 11g, Rational Rose, Microsoft Open Value Subscription through Microsoft Campus agreement to enable the students to develop their practical skills.

1.Vision

Excellence in Computer Science and Engineering by offering quality technical education catering to research and development.

2.Mission

Equip the department with modern infrastructure for high quality education and carrying out research in emerging technologies in Computer Science and Engineering
Expose the students, faculty and staff to a globally competitive learning experience.
Motivate students to realize the responsibility of being professionally competent computer technocrats to serve the society by inculcating Ethical and Environmental aspects.

3.Program Educational Objectives (PEOs)

Graduates will have successful career in IT and related industries or pursue higher education and research or evolve as entrepreneurs.
Graduates will have the ability and attitude to adapt to emerging technological changes.
Graduates will excel as socially committed engineers with high ethical values, leadership qualities and empathy for the needs of society.

4.Program Specific Outcomes (PSOs)

After successful completion of the degree, the students will be able to:
Excel in software development including mobile technologies to solve complex computation task with soft skills.
Apply appreciable knowledge of IoT, Cloud Computing and Cyber Security to develop reliable IT solutions.

Exhibit proficiency in Artificial Intelligence and Big Data Analytics for providing solutions to real world problems in Industry and Research establishments.

5.PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

i) Engineering knowledge:

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

ii) Problem analysis:

Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

iii) Design/development of solutions:

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

iv) Conduct investigations of complex problems:

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

v) Modern tool usage:

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

vi) The engineer and society:

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

vii) Environment and sustainability :

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

viii) Ethics :

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

xi) Individual and team work:

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

x) Communication:

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

xi) Project management and finance:

Demonstrate knowledge and understanding of the engineering and management principles and apply these to ones own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

xii) Life-long learning:

Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

After successful completion of the degree, the students will be able to:

Excel in software development including mobile technologies to solve complex computation task with soft skills.

Apply appreciable knowledge of IoT, Cloud Computing and Cyber Security to develop reliable IT solutions.

Exhibit proficiency in Artificial Intelligence and Big Data Analytics for providing solutions to real world problems in Industry and Research establishments.
