

Department of Information Technology

Academic Year 2024 – 2025 (Even Semester)

Degree, Semester & Branch : IV Semester-B. Tech Information Technology

Course Code & Title : CS3492 & Database Management Systems

Name of the Faculty member (s) : A. Alagulakshmi, AP/IT

Innovative Practice Description

- **Unit / Topic** : Unit 1 / Dynamic SQL
- **Course Outcome** : CO1
- **Topic Learning Outcome:** TLO3
- **Activity Chosen** : Reflection
- **Justification:**
 - Reflection is the method of assessing how well the students understand a particular concepts and identify their doubts about the particular topic.
 - Dynamic SQL is used to describe SQL statements that are created dynamically while the application is running. These statements are frequently employed when working with user inputs or dynamic database objects, for example, and the precise SQL query cannot be ascertained during the development stage.
 - The purpose of this exercise is to ensure that students comprehend how dynamic SQL creates and runs SQL statements at runtime.
- **Time Allotted for the Activity:** 15 Minutes
- **Details of the Implementation:**
 - The exercise took place at the conclusion of the lecture, following a 15-minute discussion of the procedures required in running an example program from SQL, as seen in Figure 1.
 - They were given an example query and dynamic SQL syntax to work through and debate.
 - Students were asked to write their doubts or understanding level of the topic.
 - After writing explanations for the questions on the papers, the instructor distributed the paper to the students in the next class.
 - This activity helped the students to improve their understanding level.

- CO – PO / PSO mapping:

CO	PO1	PO2	PO3	PO4	PO10	PSO1
CO1	3	3	3	3	3	3

(1 – Low 2 – Moderate 3 – High)

- PO / PSO mapped:

Innovative practice	PO1	PO2	PO3	PO5	PO10	PSO1
	3	3	3	3	3	3
Justification for correlation	Students will use this to comprehend the syntax and query of dynamic SQL.	students will be able to recognize, create, and run SQL statements.	students will be able to create, build, and run dynamic queries in SQL Server.	Students will be able to leverage dynamic database objects or user inputs.	Students will be able to explain both static and dynamic SQL.	Students will be able to comprehend that static SQL is easier to maintain and faster than dynamic SQL.

- Images / Screenshot of the practice:

Fig 1: Reflection Activity

Fig 2: Sample Sheet of Reflection Activity

- **Reflective Critique:**

- ❖ ***Feedback of practice from students and other stakeholders:***

- The students were given the opportunity to assess themselves and determine the procedures involved in running the SQL statement.
- Students thought that the activity allowed them to ask their doubts and get clarified from instructor.

- ❖ ***Benefit of the practice:***

- This exercise raises students' comprehension level by making it easy to identify those who didn't grasp the Dynamic SQL syntax and example query.

- ❖ ***Challenges faced in implementation:***

- A few students discovered a SQL query mistake.
- Since few students chose not to ask any questions, I was unable to fully comprehend the viewpoints of every student.

In the next class, I answered all of the students' questions and all doubts were clarified.
