

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University
Accredited by NAAC & An ISO 9001:2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Information Technology

Academic Year 2023 – 2024 (Even Semester)

Degree, Semester & Branch: II Semester, B. Tech. IT

Course Code & Title: CS3251 & Programming in C

Name of the Faculty member (s): Mrs. G. Mareeswari, AP/IT

Innovative Practice Description

Unit / Topic: Unit II / Strings and its operations.

Course Outcome: CO 2

Topic Learning Outcome: TLO 6

Activity Chosen: Mind Map

Justification:

String is one of the important topics in most of the programming languages. In the same way, String also plays a major role in the C programming language. In C there is a header file in the name of string and it support many string related pre-defined functions to the program. A mind map allows students to organize the information about the concept in a hierarchical and structured order, making it easier to understand the relationships between the various sections. Drawing a mind map is an active learning exercise in which students generate and organize the content. It motivates students to think critically about the subject and actively participate in the process of own learning.

- **Time Allotted for the Activity:** 15 minutes

Details of the Implementation:

- The teacher discussed the concepts/topics in the classroom for 30 minutes.
- Based on the discussion and the instructor asked the students to draw a mind map related to the topic within 15 minutes as shown in Figure 1.
- Each student created a mind map on the topic string and its operations
- Students use visual representation to convey the concepts taught in class.
- Instructor collected the sheets from the students.

CO – PO / PSO mapping:

CO	PO1	PO2	PO3	PO9	PSO1	PSO2	PSO3
CO2	2	2	1	1	2	1	1

(1 – Low 2 – Moderate 3 – High)

PO / PSO mapped:

Innovative practice	PO1	PO2	PO3	PO9	PSO1	PSO2	PSO3
	2	1	1	1	1	1	1
Justification for correlation	Students can able to use their knowledge on string to develop a C program to solve various engineering problems.	Knowledge of string manipulation is very essential for analyzing and solving a wide range of programming problems.	Students can be able to provide solution to the real time decision making problems using the concept of strings.	Students participated in this activity as a individual and provide the visual representation of string concept.	Students can be able to apply string concept in the data science and algorithm field to find solution for the complex problem.	The concept is used in developing the IOT, Mobile Application projects.	The concept is used in developing software projects.

Reflective Critique:***Feedback of practice from students and other stakeholders:***

- Students felt that visual representation of the learned topic make them to understand the topic in depth,
- Some students expressed that the activity helps them to recall the most important key terms about the particular topic.

Benefit of the practice:

- From this activity, the students can get more clarity in the strings concept.
- Through this activity, the students are able to remember and describe the various string operations and it methods clearly

Challenges faced in implementation:

- Some of the students feel difficult to depict the concepts pictorially
- Some of them need some more clarification on the operations.
- Additional examples given to make them to understand the concept easily.
- Some students felt they need extra time to cover all the string operations and methods.
