

Department of Information Technology
Academic Year 2023 – 2024 (Odd Semester)

Degree, Semester & Branch : III Semester-B. Tech Information Technology
Course Code & Title : CS3391 Object Oriented Programming
Name of the Faculty member (s) : S. Sakkaravarthi, AP/IT

Innovative Practice Description

- **Unit / Topic** : Unit 3 / Interthread Communication
- **Course Outcome** : CO3
- **Topic Learning Outcome:** TLO11
- **Activity Chosen** : Reflection
- **Justification:**
 - The Reflection activity is to make the students to write their doubts in a paper on the topic, so as the teacher can discuss and clarify the doubts that are not understood by the students.
 - Interthread communication is a mechanism that allows threads to exchange information or coordinate their execution. It enables threads to work together to solve a common problem or to share resources.
 - In order to clarify the doubts that are not understood by the students, this activity is chosen.
- **Time Allotted for the Activity:** 15 Minutes
- **Details of the Implementation:**
 - After explaining Interthread Communication concept with example program in the class room, the reflection activity was carried out for a total of 15 minutes.
 - The Students learned about “Interthread Communication” with the help of examples.
 - Students wrote the questions that have doubts in the topic learned in the class room. It is shown in Fig 1
 - After writing explanations for the questions on the papers, the teacher distributed the paper to the students in the next class.
 - This activity helped the students to get clarified with their doubts.
- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO10	PSO1
CO3	3	2	2	1	3

(1 – Low 2 – Moderate 3 – High)

- PO / PSO mapped:

Innovative practice	PO1	PO2	PO3	PO10	PSO1
Justification for correlation	The concept of interthread communication is introduced to the students who can use it when creating projects.	Students will be able to develop real time applications using inter thread communication concept.	Students will be able to create multiple threaded application programs to solve a realtime problem	The Students concise writing of their questions helped them in develop their skills.	The Students apply the interthread communication mechanism in developing software applications

- Images / Screenshot of the practice:

Fig 1: Reflection Activity

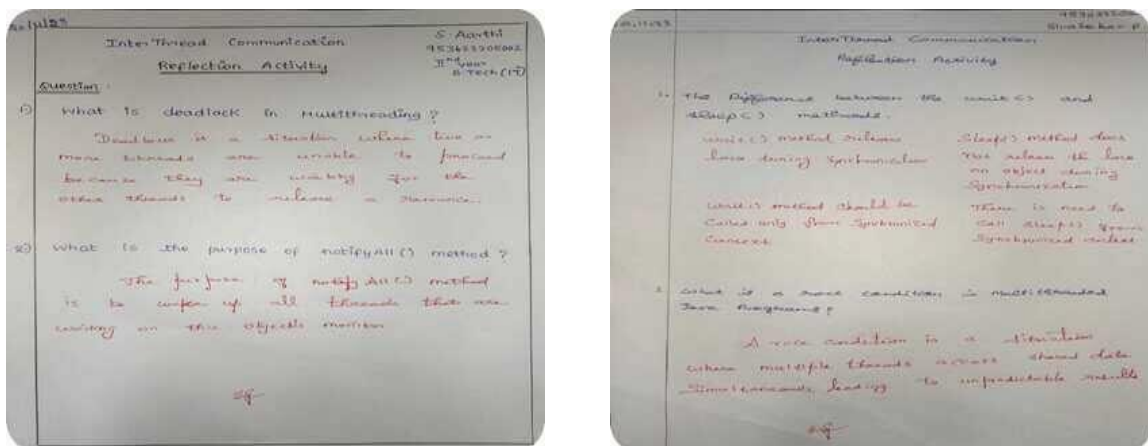

Fig 2: Sample Sheet of Reflection Activity

- **Reflective Critique:**

- ❖ ***Feedback of practice from students and other stakeholders:***

- The Students were allowed to evaluate themselves and identify areas where they needed further clarification.
- Students said that the activity assisted them in determining their level of understanding of the concept.
- They felt comfortable to clarify their doubts in the topic

- ❖ ***Benefit of the practice:***

- This activity makes it simple to identify students who didn't get the fundamentals and to provide them with further explanations in the subsequent lesson, so raising their comprehension level.
- The Reflection activity made the slow learners to clarify the doubts easily.
- From this activity, Students can get more clarity in the particular topic

- ❖ ***Challenges faced in implementation:***

- Since some students didn't ask any questions, we weren't able to gather an accurate representation of the opinions of all the students.
- Few Students were not able to express their doubts in the questions.

In the next class, I discussed all the doubts with the students and make them understand the topic. Students those who didn't wrote their doubts in the activity also felt that they understand the topic better after discussion.
