

Department of Information Technology
Academic Year 2023 - 2024 (Even Semester)

Degree, Semester & Branch: IV Semester B.Tech. IT

Course Code & Title: CS3491 & Artificial Intelligence and Machine Learning

Name of the Faculty member (s): Mrs. G.Mareeswari, AP/IT

Innovative Practice Description

- **Unit / Topic:** Unit II / Bayesian Network
- **Course Outcome:** CO2
- **Activity Chosen:** One Minute Paper

- **Justification:**

In Artificial Intelligence, Bayesian networks are widely employed to deal with business activities. The Bayesian network is a crucial computer technique which is used in developing search engines, diagnosing various diseases, filtering spam emails, gene regulatory networks, and for many more similar works. In one-minute paper activity the students will be given with 5 minutes to write the brief about that class session. In order to have a recap of content Bayesian Network this activity is chosen.

- **Time Allotted for the Activity:** 10 Minutes

- **Details of the Implementation:**

At the end of the lecture, students were instructed to write about the Bayesian Network concept that had been discussed. During the first 35 minutes, the instructor explained the network and Bayesian network related concepts/topic in the classroom. The students stated their understanding of the Bayesian Network topic as well as the information for which they require additional explanation. Figure 1.a and Figure 1.b shows the points about Bayesian network that students shared during this activity. This task assesses students' understanding of the idea of Bayesian network. This activity demonstrated the involvement of students in the particular class.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PSO1	PSO2	PSO3
CO2	2	1	1	1	1	1

(1 – Low 2 – Moderate 3 – High)

• PO / PSO mapped:

Innovative practice	PO1	PO2	PO3	PSO1	PSO2	PSO3
	2	1	1	1	1	1
Justification for correlation	Needs basic engineering knowledge for understand the Bayesian network concept	Bayesian network concept can also be used to analyze the complex engineering problems.	The students can able to find solution for the complex problems using the concept of Bayesian Network	Bayesian Networks are used in many data science algorithm to solve complex computational problem	The students can apply the concept of Bayesian Network in research finding and provide reliable solution	The students can use this concept of Bayesian Network in software project development.

• Images / Screenshot of the practice:

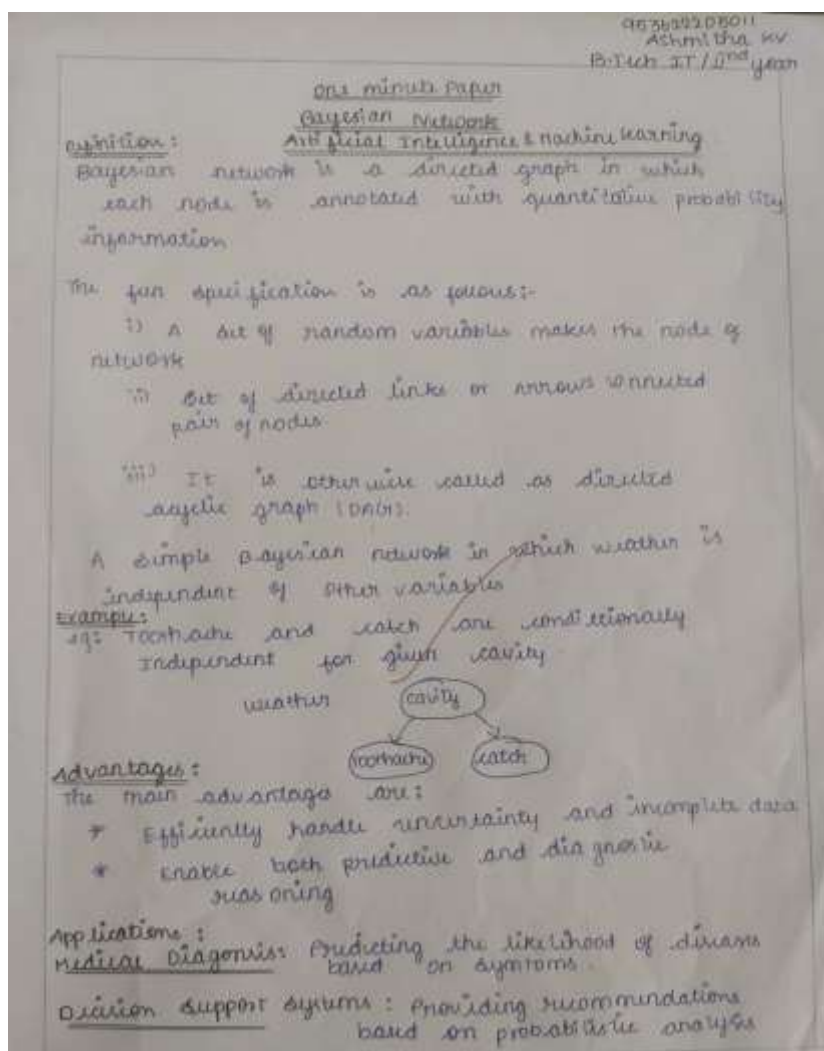

Figure 1. a Sample One-Minute Paper of Ashmitha. K. V

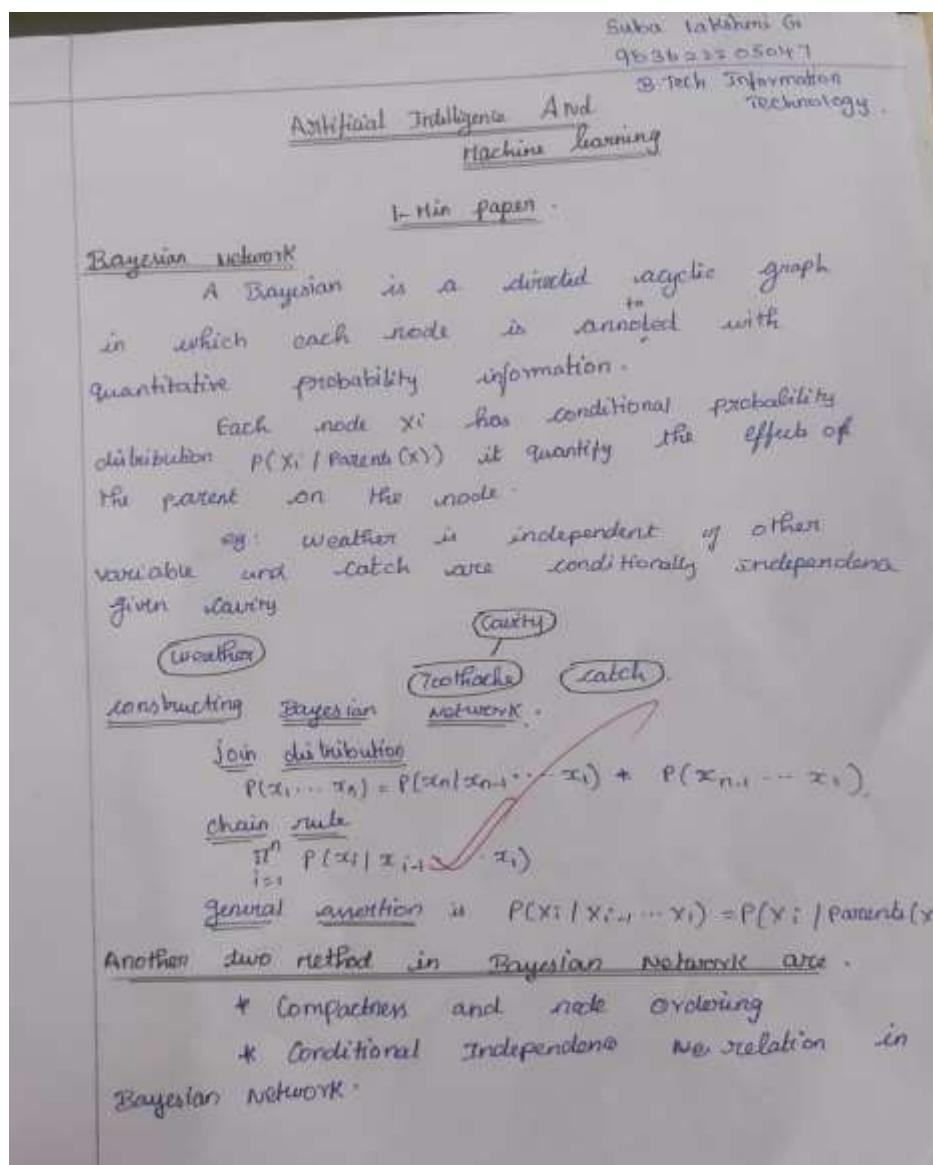

Figure 1.b Sample One-Minute Paper of Suba Lakshmi. G

Reflective Critique:

❖ *Feedback of practice from students and other stakeholders:*

- The students felt that they can able to understand the Bayesian network topic clearly after conducting this activity.
- They felt this activity makes them to concentrate and memorize the concept earlier;

❖ *Benefit of the practice:*

- Students were actively participated in this activity.

- From this activity, the students can get more clarity in the Bayesian network topic.
- Students can able to explain the topic without any confusion.
- Make the students to know the impact and importance of sharing their views and understanding related to the topic and made them involve in the activity.

❖ ***Challenges faced in implementation:***

- Some students are hesitated and lack to write the concepts that they learnt in the class.
- Some students make mistake in the way of formulating the Bayesian network for the concept discussed in the class. After final discussion they got clear understanding.
